Title: Quizlet

Description: *Quizlet* is a tool for creating study sets. Typically, this means sets such as vocabulary terms and definitions, but anything you wish to pair can work. There are pictures, drawings, and recently they have upgraded tools for digital diagrams. The digital diagrams feature looks exciting for applications across disciplines, including biology and geography (maps). Users can choose from multiple languages in both terms and definitions. All users can create the sets, so teachers can create sets for their students, but students can create them for themselves as well.

Originally designed to take the concept of flashcards into the digital interactive age, the site has greatly expanded on the power of the tools, but still retains the lovely simplicity of this basic educational tool. The site works on the computer, and most features can be used on any smart device.

What can Quizlet.com do?

For Students:	For Instructors:
- Make digital flashcards	- Organize a group for each class
- Generate practice tests	- Share materials with other professors
- Play games with vocabulary	- Share study sets periodically all semester
- Compete against classmates	- Import sets from existing vocabulary lists
- Load flashcards on cell phones	- Email students when new sets are ready
- Create their own sets for any class	- Play Quizlet live games in class
- Search through over 150 million sets in every subject
