Interstitial lamella

Lacuna (with osteocyte)

Table 6.1 Bone Markings		
NAME OF BONE MARKING	DESCRIPTION	ILLUSTRATIONS
<b>Projections That Are Sites of Muscle and Ligament Attachment</b>		
Tuberosity (too'bĕ-ros'ĭ-te)	Large rounded projection; may be roughened	
Crest	Narrow ridge of bone; usually prominent	
Trochanter (tro-kan'ter)	Very large, blunt, irregularly shaped process (the only examples are on the femur)	
Line	Narrow ridge of bone; less prominent than a crest	
Tubercle (too'ber-kl)	Small rounded projection or process	
Epicondyle (ep'i-kon'dĭl)	Raised area on or above a condyle	
Spine Process	Sharp, slender, often pointed projection Any bony prominence	

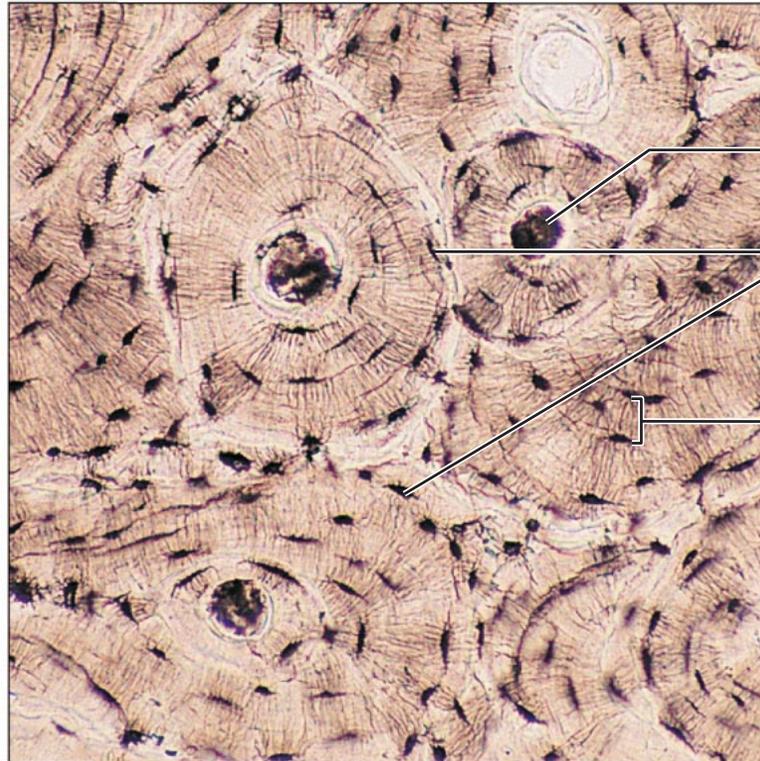

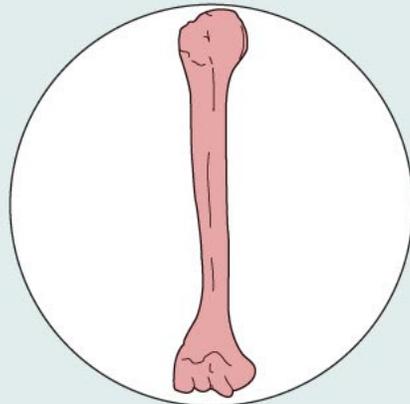

Table 6.1 Bone Markings (continued)		
NAME OF BONE MARKING	DESCRIPTION	ILLUSTRATIONS
<b>Projections That Help to Form Joints</b>		
Head	Bony expansion carried on a narrow neck	
Facet	Smooth, nearly flat articular surface	
Condyle (kon'dil)	Rounded articular projection	
Ramus (ra'mus)	Armlike bar of bone	
<b>Depressions and Openings</b>		
<b>For Passage of Blood Vessels and Nerves</b>		
Groove	Furrow	
Fissure	Narrow, slitlike opening	
Foramen (fo-ra'men)	Round or oval opening through a bone	
Notch	Indentation at the edge of a structure	
<b>Others</b>		
Meatus (me-a'tus)	Canal-like passageway	
Sinus	Cavity within a bone, filled with air and lined with mucous membrane	
Fossa (fos'ah)	Shallow, basinlike depression in a bone, often serving as an articular surface	

(j) Others: bone (osseous tissue)

Description: **Hard, calcified matrix** containing many collagen fibers; osteocytes lie in lacunae. **Very well vascularized.**

Function: **Bone supports and protects** (by enclosing); provides levers for the muscles to act on; **stores** calcium and other minerals and fat; marrow inside bones is the site for **blood cell formation (hematopoiesis).**

Location: **Bones**

Central canal  
Lacunae  
Lamella

Photomicrograph: **Cross-sectional view of bone (125x).**

Use the following pictures to help you practice finding the terms from the lab term handout on unlabeled images.

- Remember, you won't learn them if you don't take plenty of time to practice!
- Also, be sure to mix up the order once you get comfortable with the unlabeled slides.
- Over the weekend, once you are feeling confident with the pictures here, do the bone model quizzes in PAL (from the Pearson website) to get practice with new pictures that you haven't seen.

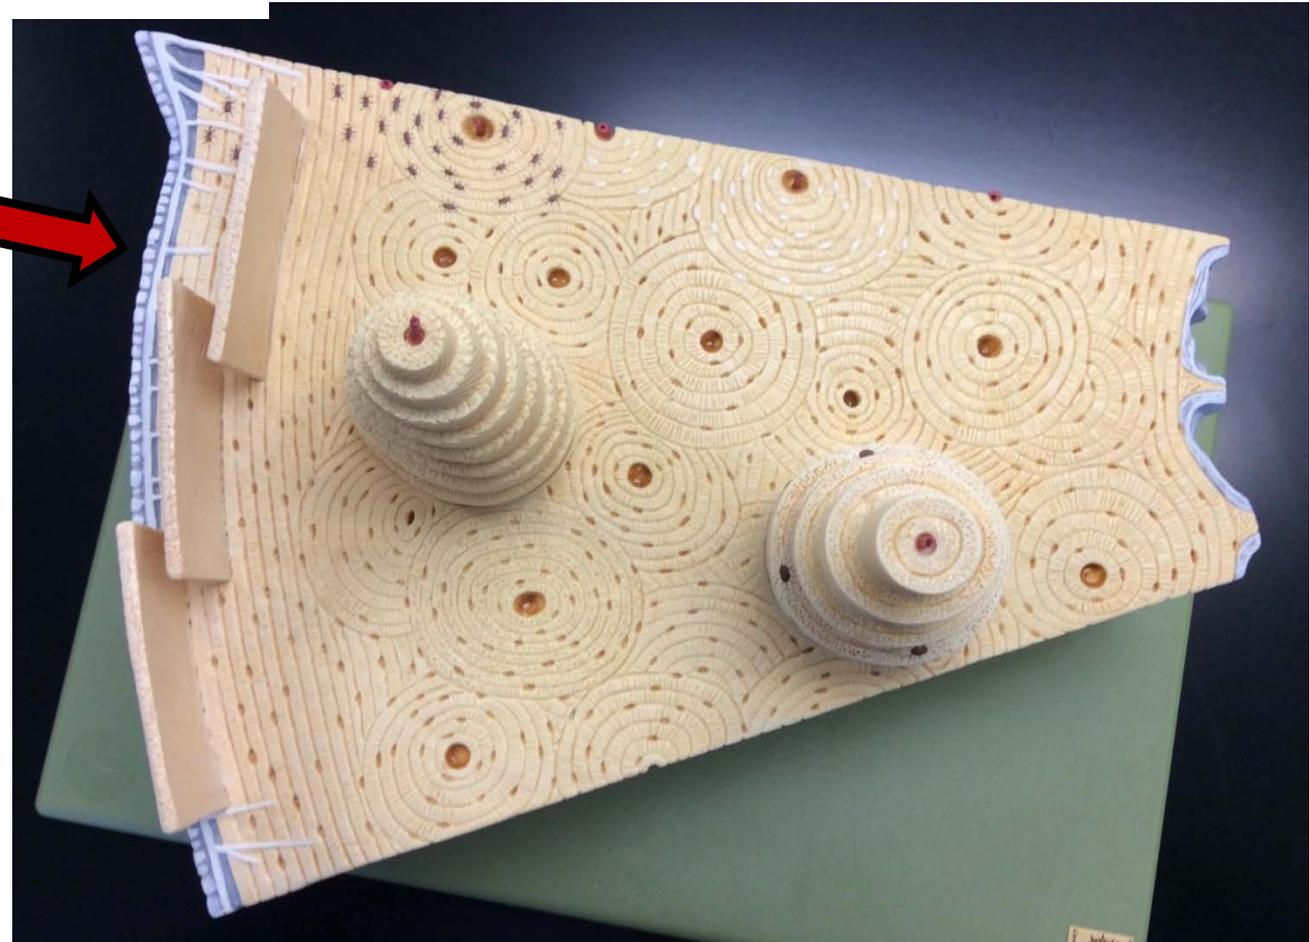

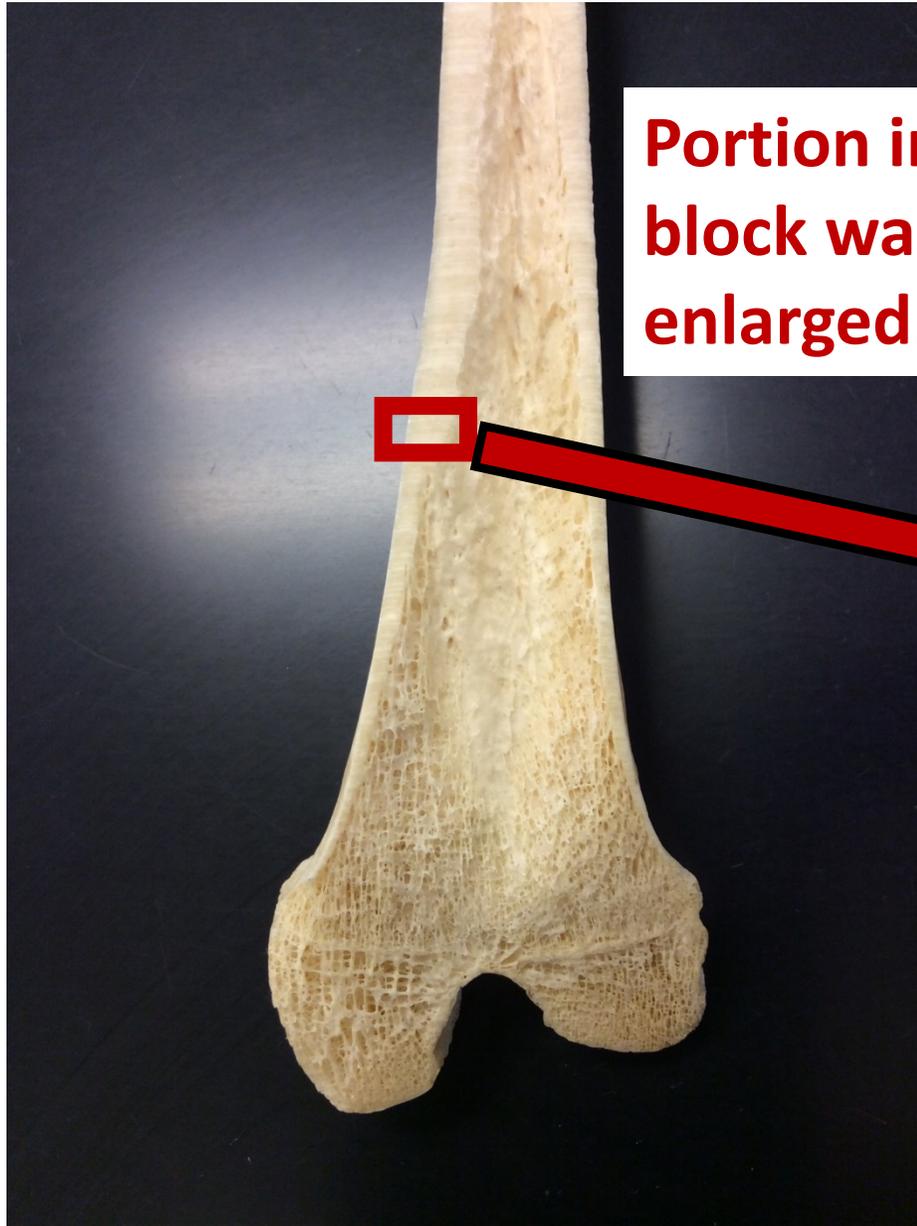

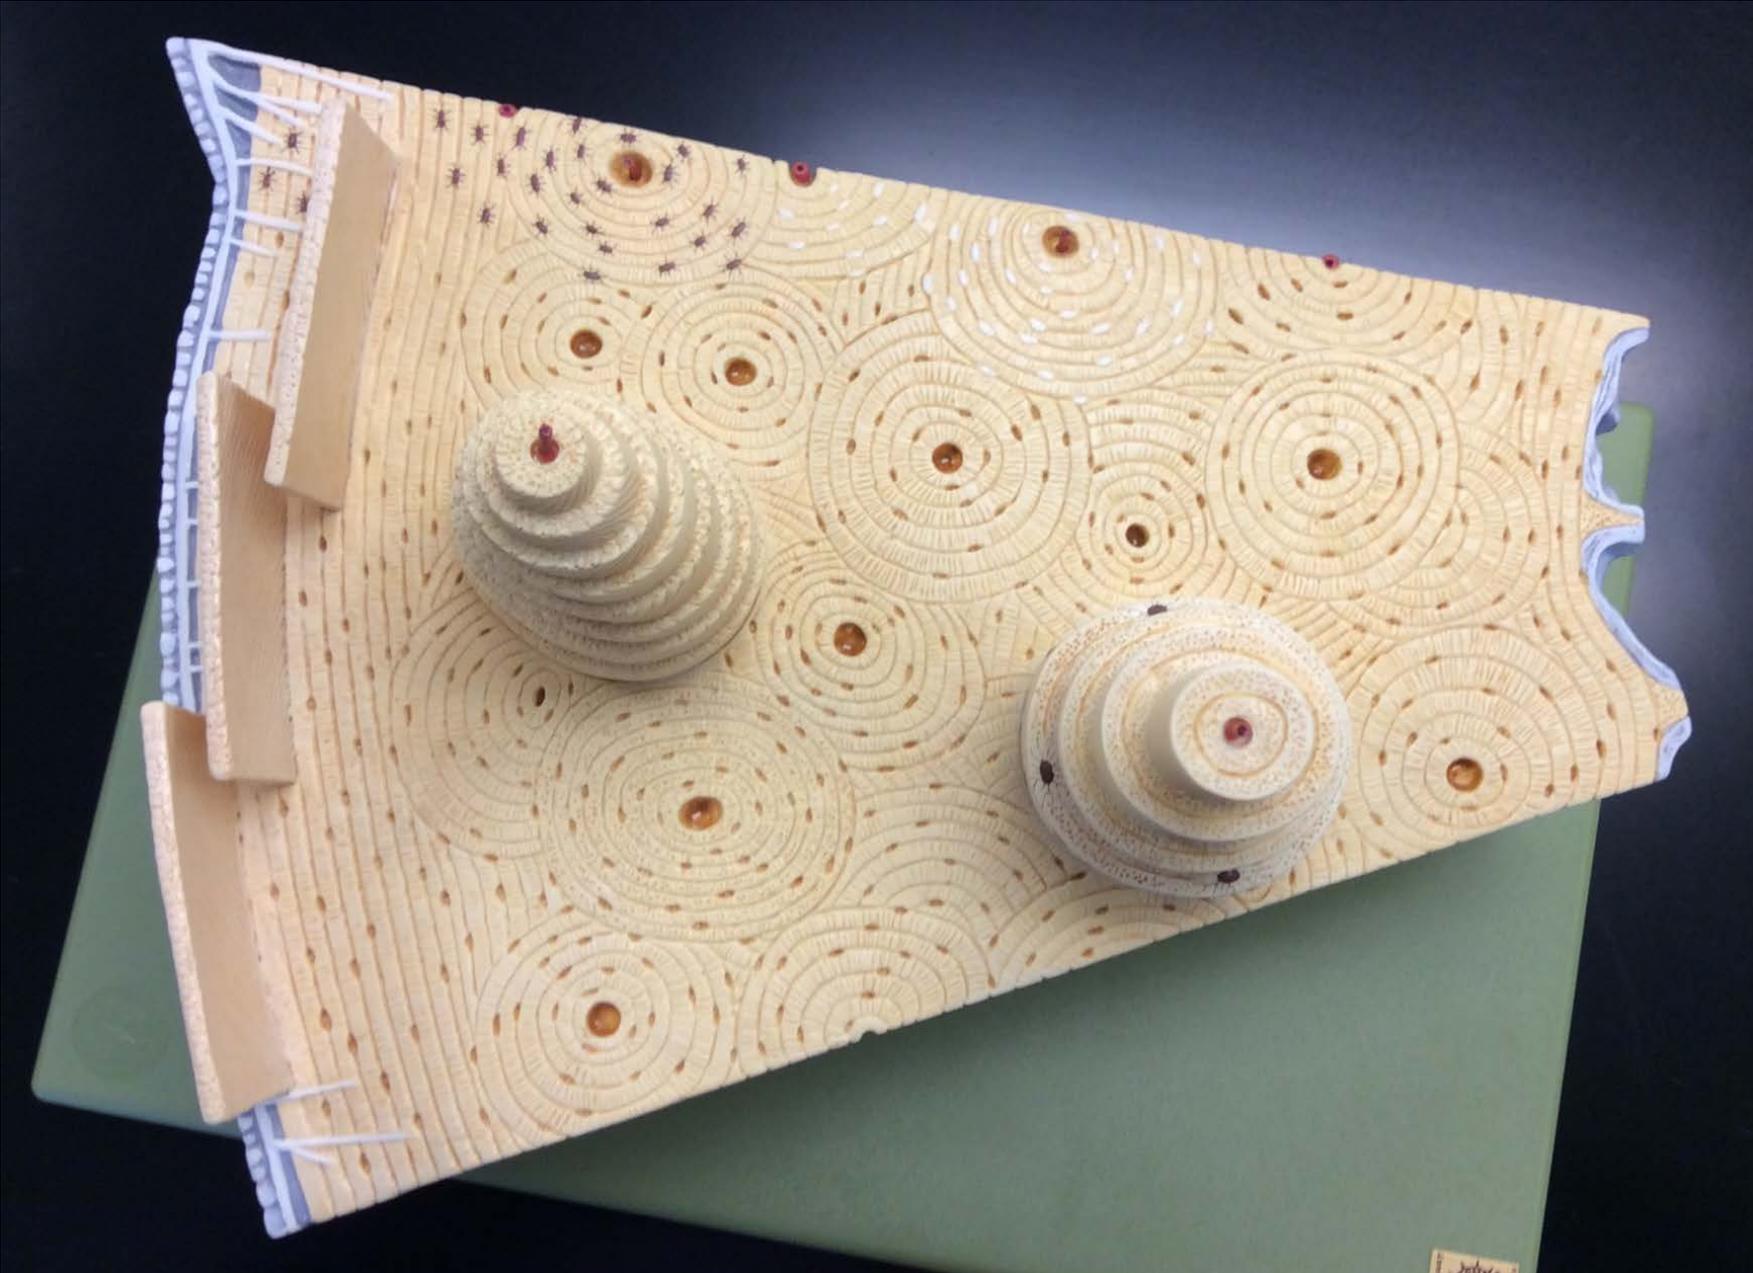

This picture is not for labeling,  
but is to show you what the below model  
is showing you.

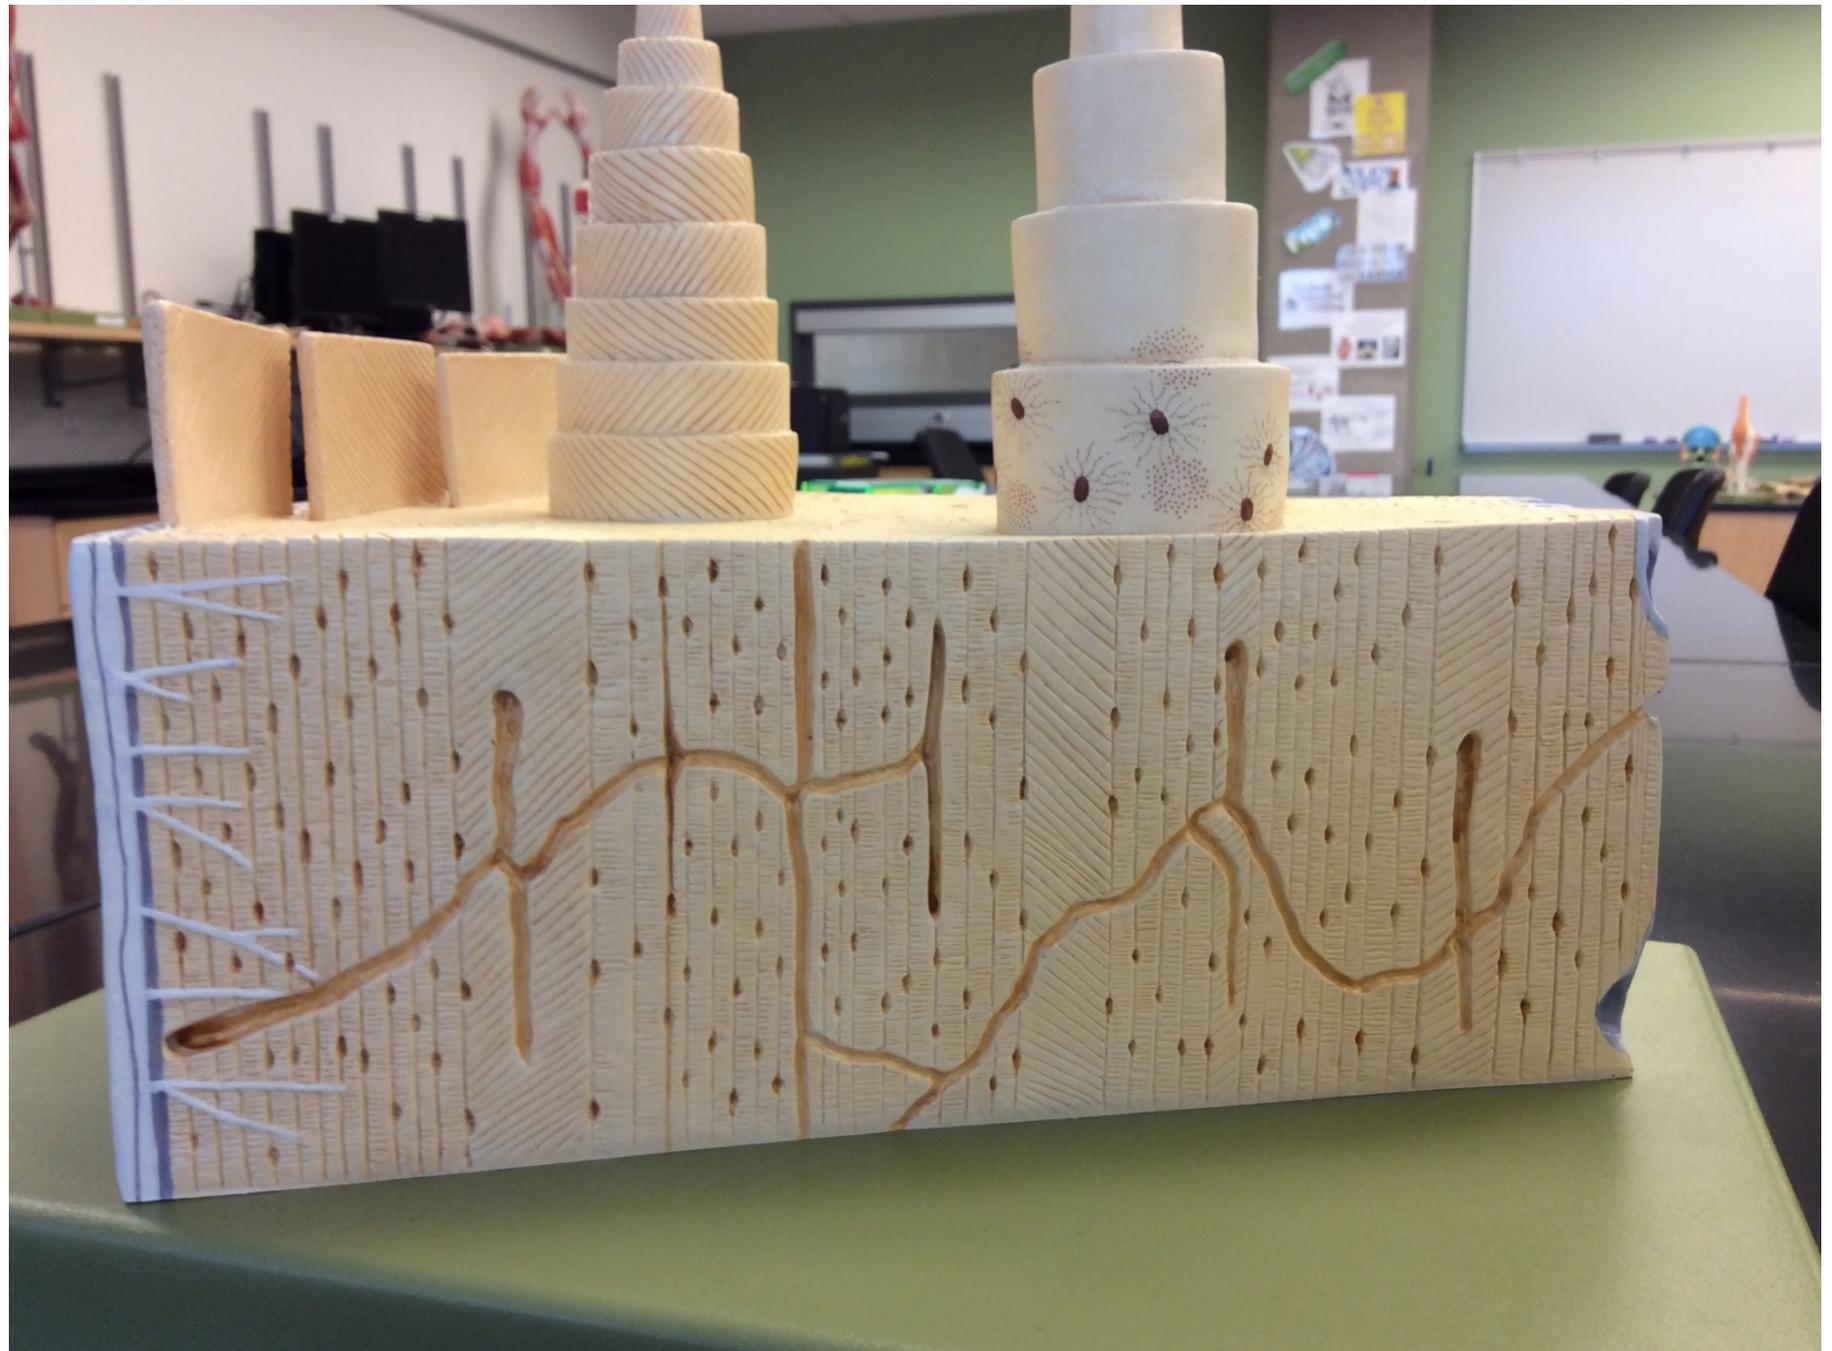

Portion inside the  
block was cut out and  
enlarged.

**Slice from the side  
of a long bone.**

**Slice from the side  
of a long bone.**

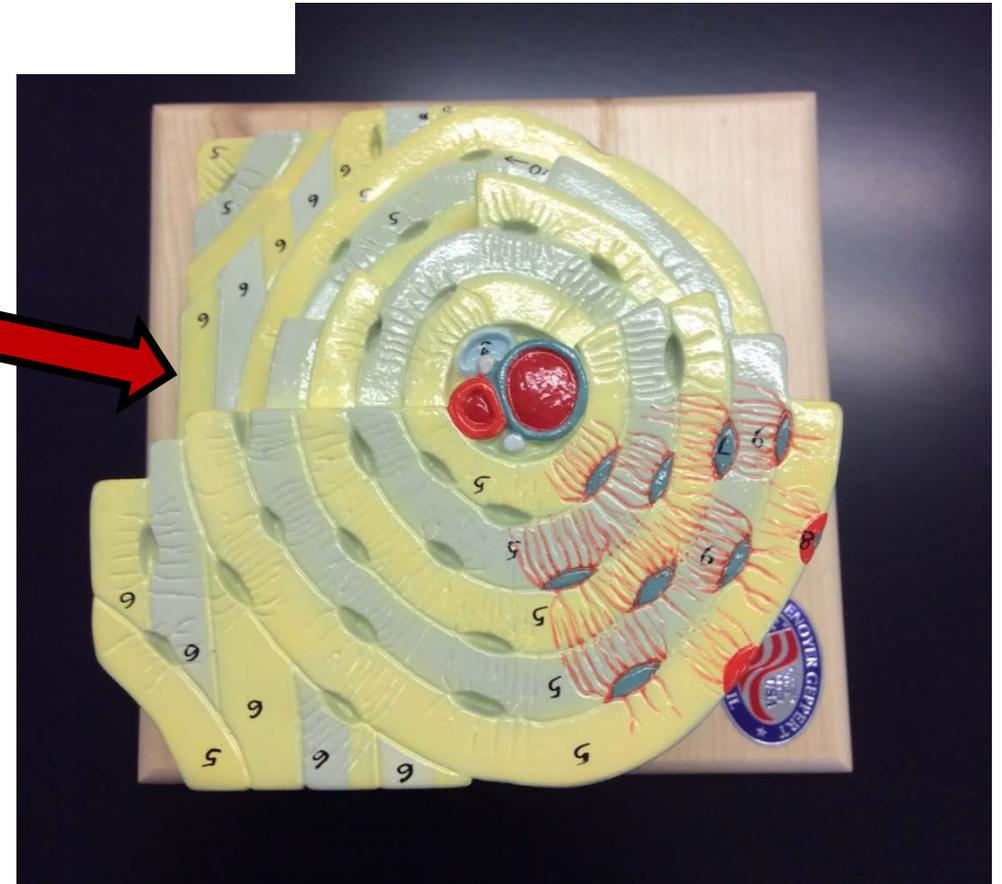

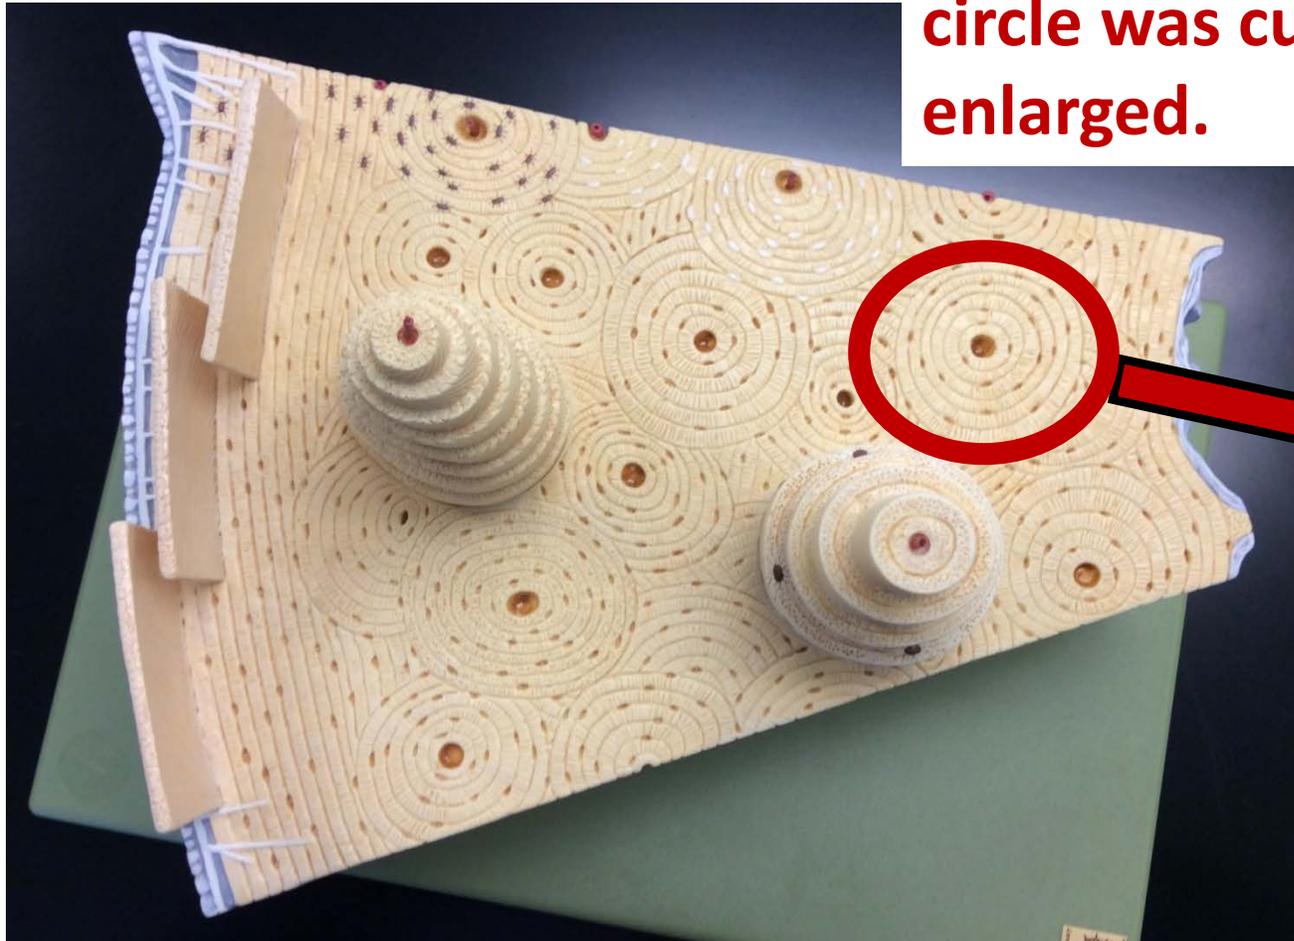

**Slice from the side  
of a long bone.**

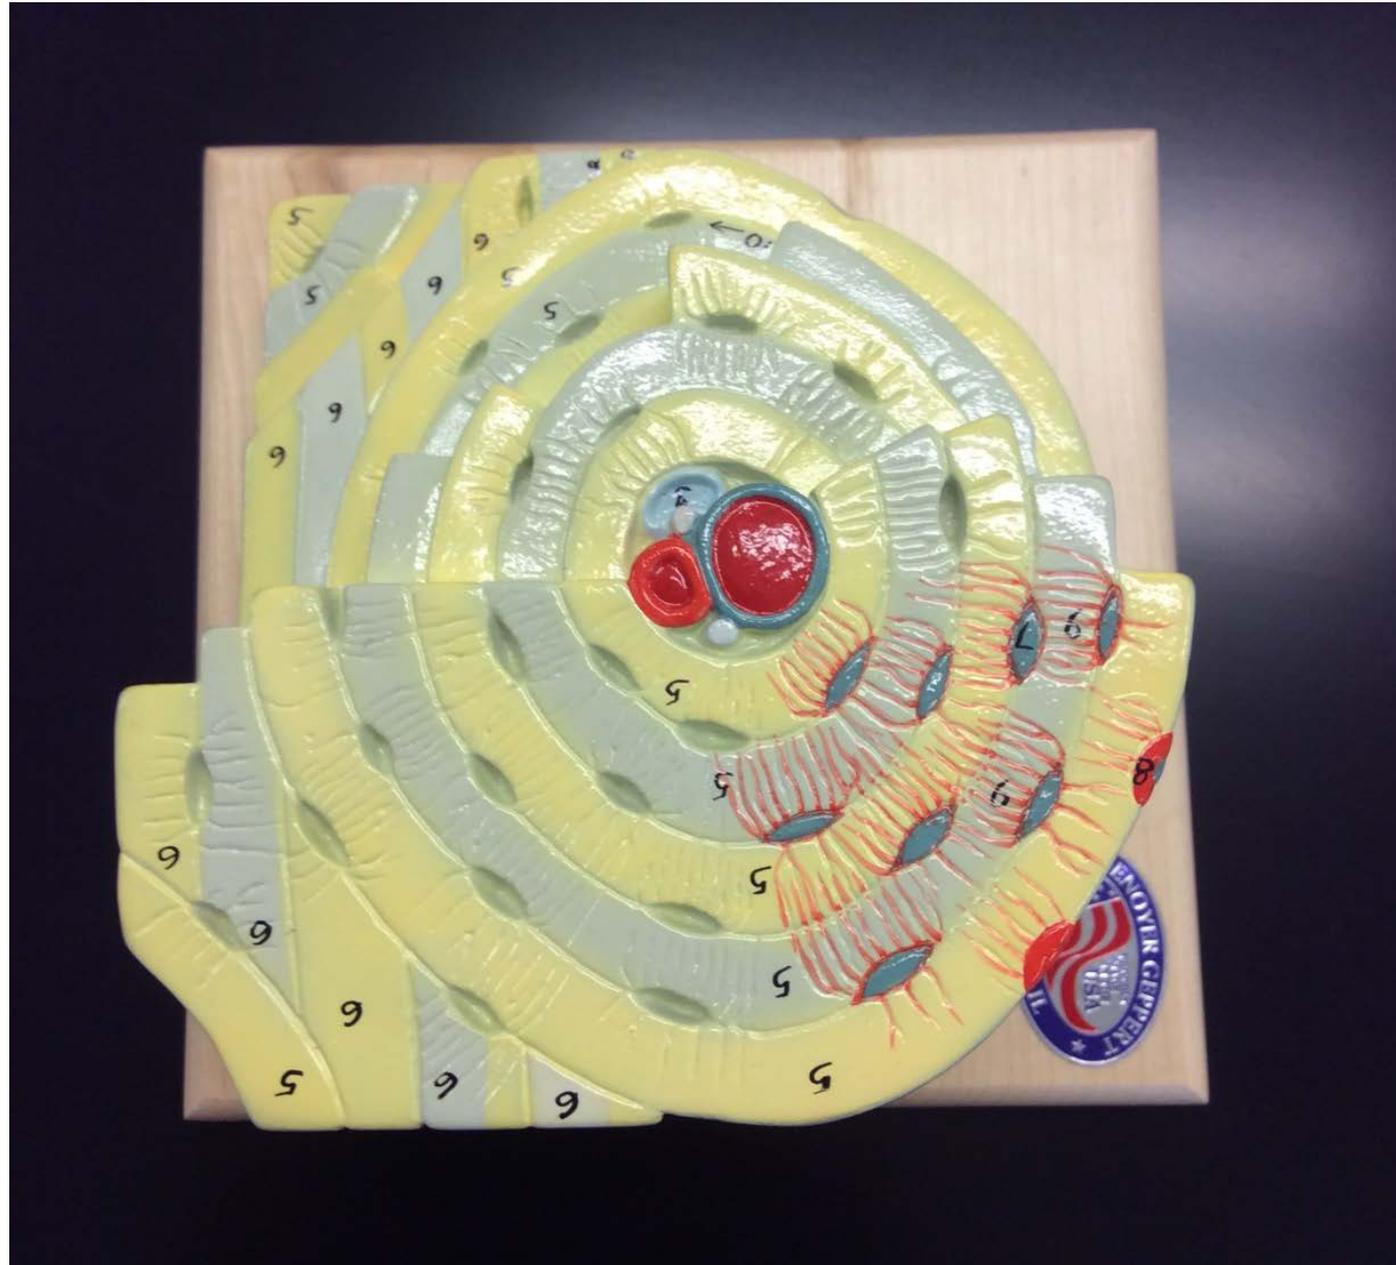

This picture is not for labeling, but is to show you what the below model is showing you.

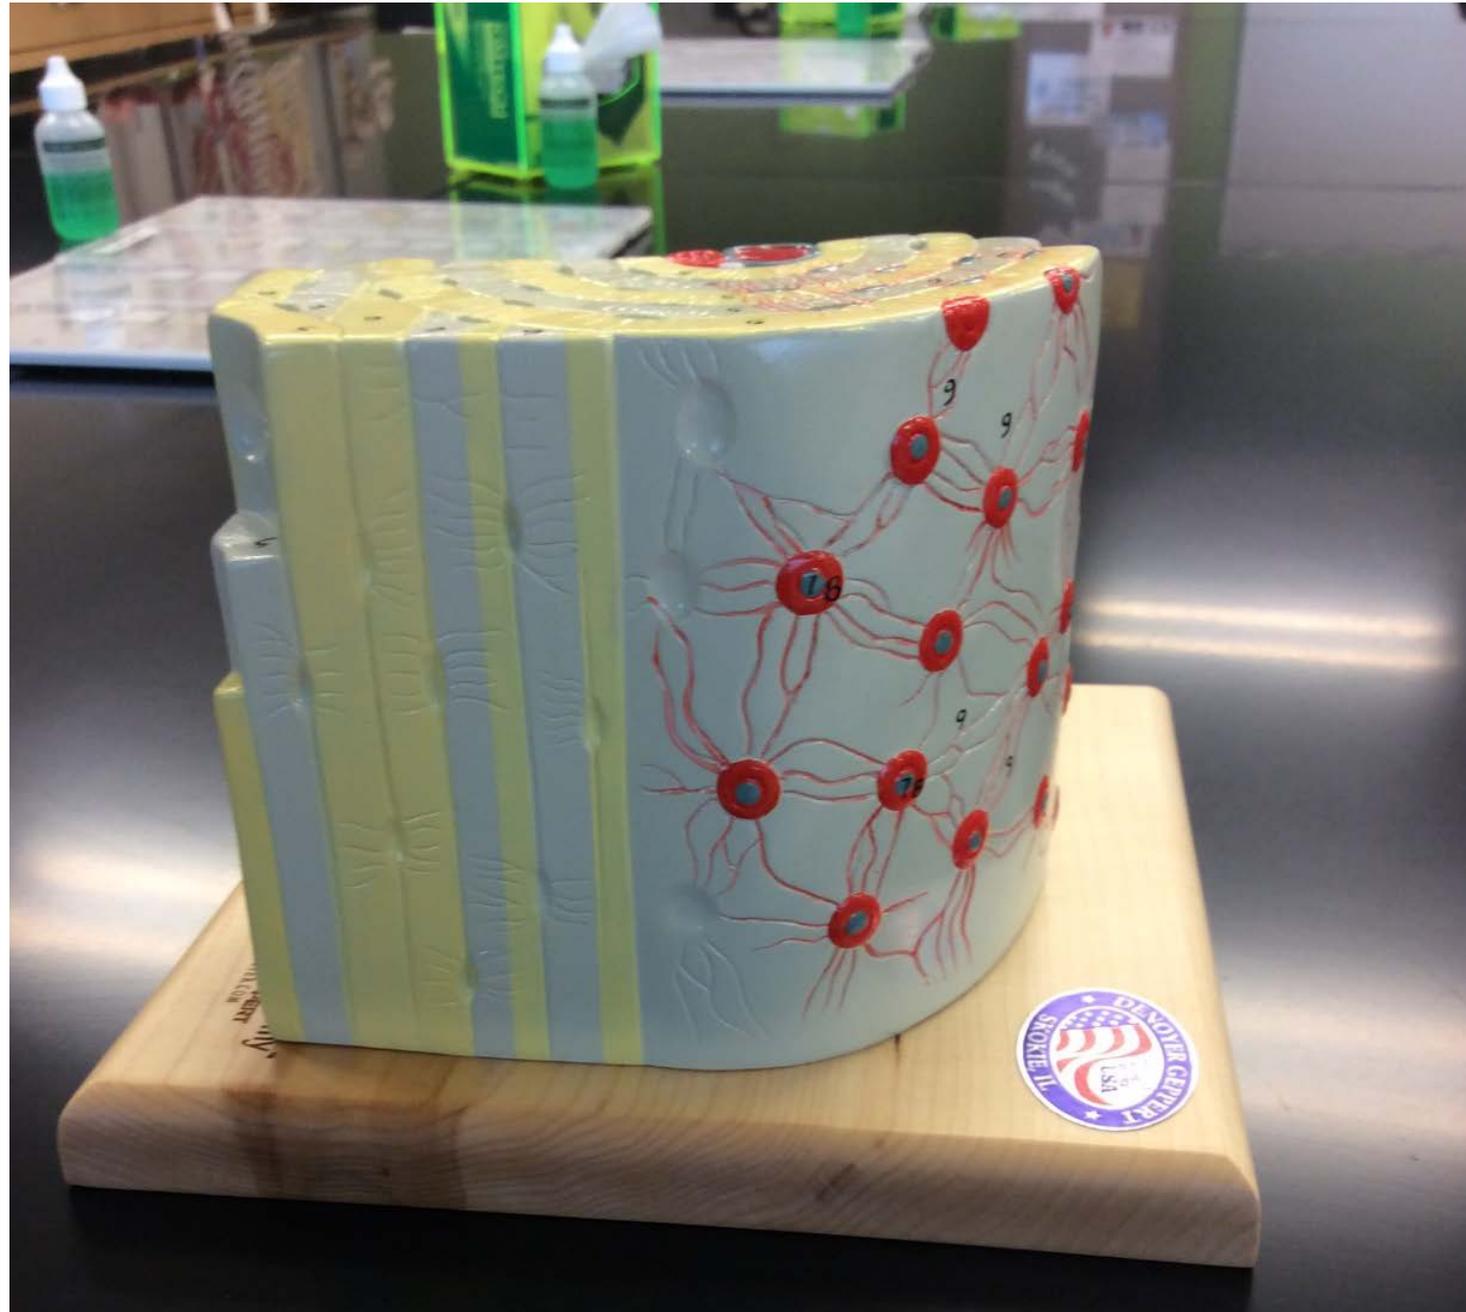

Portion inside the circle was cut out and enlarged.

# One osteon and edges of nearby osteons

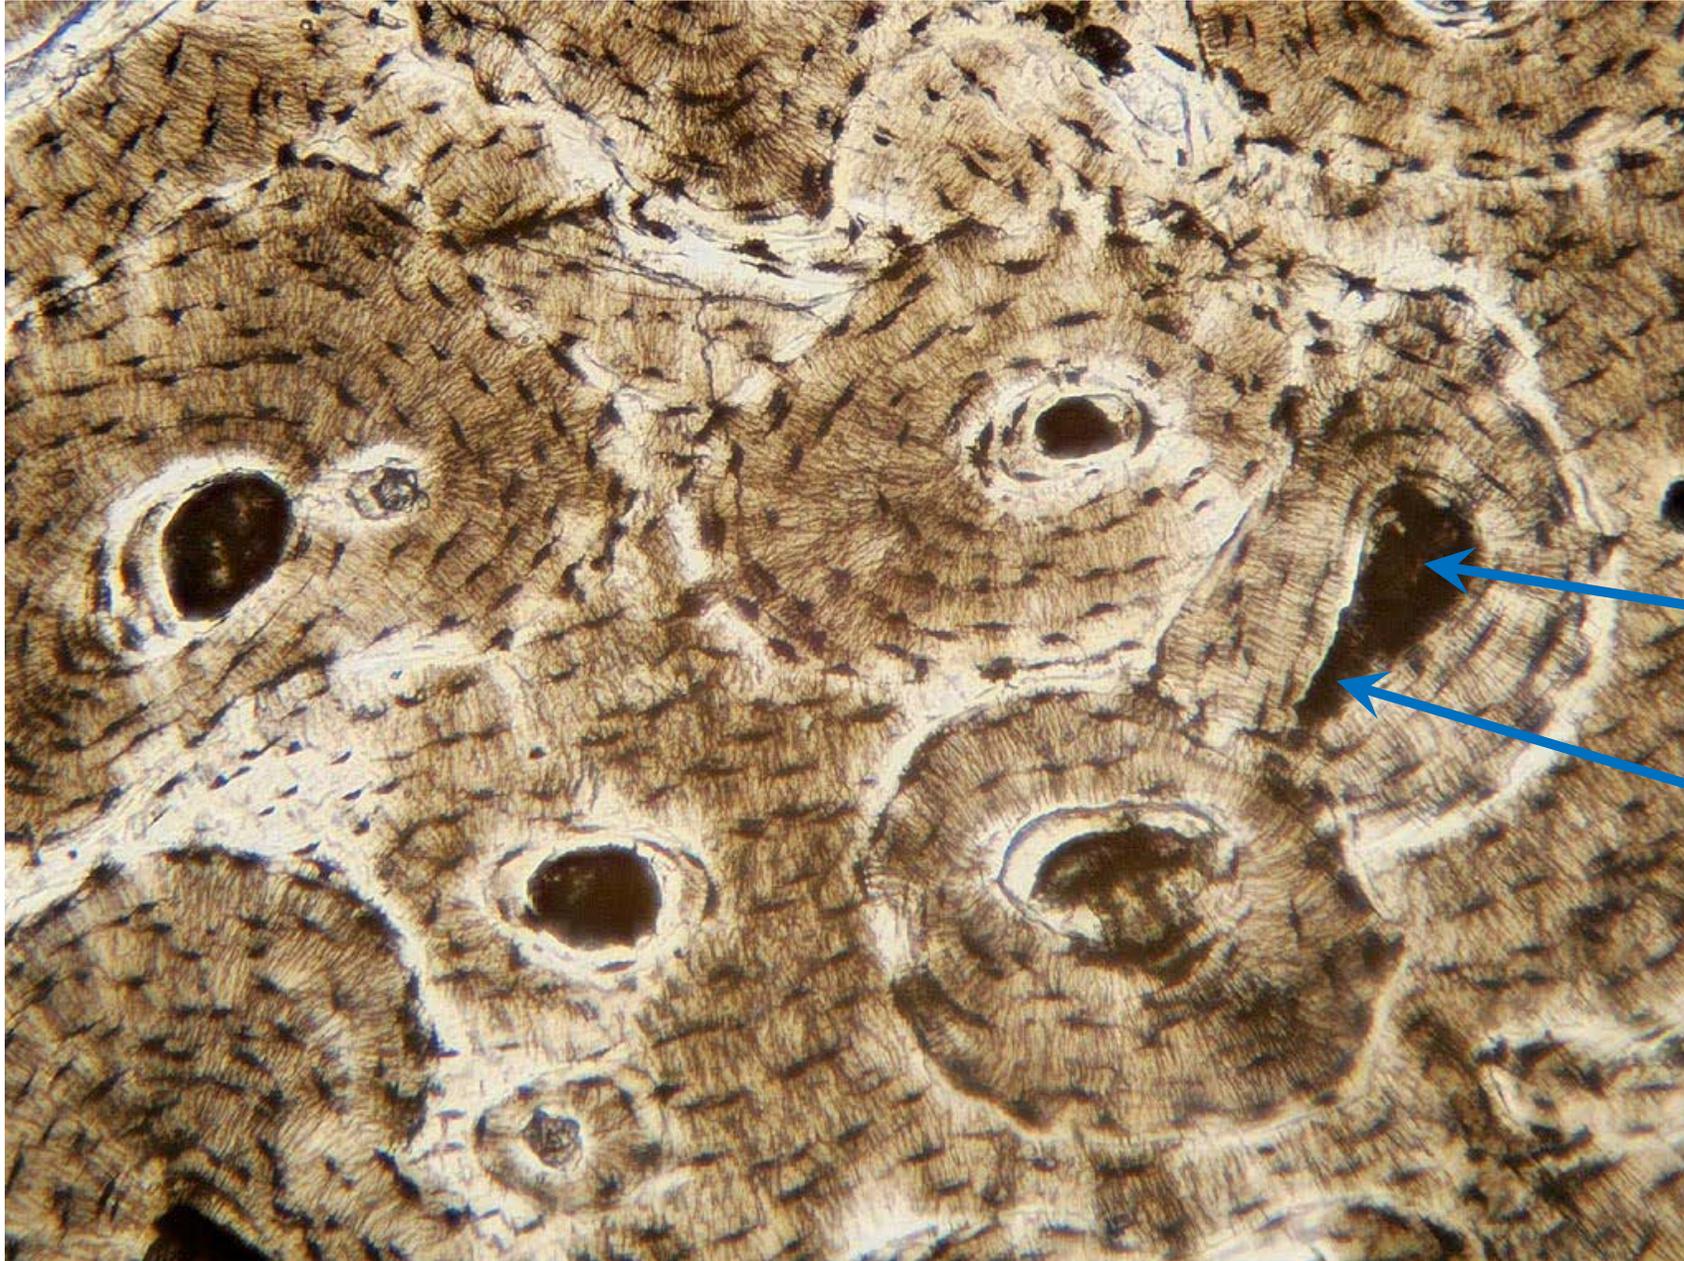

**One osteon**  
and edges of  
nearby osteons

**One osteon**  
and edges of  
nearby osteons

Hint: The arrows are pointing to 2 different open spaces that connect to each other.

# Use the following pictures to help you identify terms from the lab term handout.

Another good resource is the Visible Body app: <http://skeleton.visiblebody.com>

Don't forget that to use the link to download to a personal device, the device must first be connected to the MCPA Wi-Fi at the Rockville campus.

**\*\*If you feel like you are struggling**, there are videos that can help you! Go to the textbook website and select the tab on the left labeled "Study Area (myA&P)". Next, there will be a lot of tabs on the left of the screen...look for "Lab Videos" and select "Bone and Dissection Videos." Watch whichever bone videos you need (in the box on the left).

\*The color code beside each bone name corresponds to the bone's color in the illustrations (see Figures 7.4 to 7.14). The number in parentheses ( ) following the bone name indicates the total number of such bones in the body.

Table 7.1 Bones of the Skull (continued)		
VIEW OF SKULL	BONE WITH COMMENTS*	IMPORTANT MARKINGS

Superior view of skull, calvaria removed (Figure 7.7)

### Cranial bones

**Temporal (2)**  
Form inferolateral aspects of the skull and contribute to the middle cranial fossa; have squamous, tympanic, and petrous parts

**Zygomatic process:** contributes to the zygomatic arch, which forms the prominence of the cheek

**Mandibular fossa:** articular point for the condylar process of the mandible

**External acoustic meatus:** canal leading from the external ear to the eardrum

**Styloid process:** attachment site for several neck and tongue muscles and for a ligament to the hyoid bone

**Mastoid process:** attachment site for several neck muscles

**Stylomastoid foramen:** passageway for cranial nerve VII (facial nerve)

**Jugular foramen:** passageway for the internal jugular vein and cranial nerves IX, X, and XI

**Internal acoustic meatus:** passageway for cranial nerves VII and VIII

**Carotid canal:** passageway for the internal carotid artery

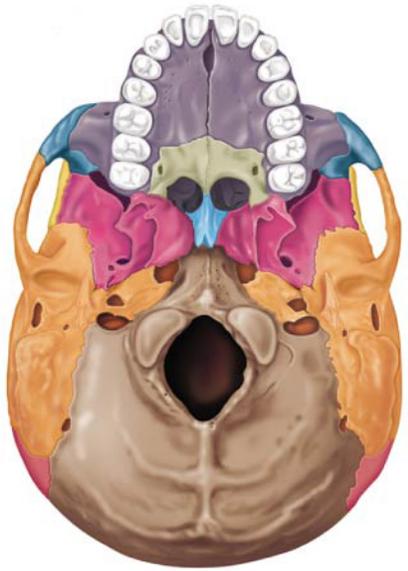

\*The color code beside each bone name corresponds to the bone's color in the illustrations (see Figures 7.4 to 7.14). The number in parentheses ( ) following the bone name indicates the total number of such bones in the body.

Table 7.2-1 Regional Characteristics of Cervical, Thoracic, and Lumbar Vertebrae

<b>Table 7.2</b>		<b>Regional Characteristics of Cervical, Thoracic, and Lumbar Vertebrae</b>		
<b>CHARACTERISTIC</b>	<b>CERVICAL (3–7)</b>	<b>THORACIC</b>	<b>LUMBAR</b>	
Body	Small, oval, wide side to side	Larger than cervical; heart shaped; bears two costal facets	Massive; kidney shaped	
Spinous process	Short; bifid (except C <sub>7</sub> ); projects directly posterior	Long; sharp; projects inferiorly	Short; blunt; rectangular; projects directly posteriorly	
Vertebral foramen	Triangular, large	Circular	Triangular	
Transverse processes	Contain foramina	Bear facets for ribs (except T <sub>11</sub> and T <sub>12</sub> )	Thin and tapered	
Superior and inferior articular processes	Superior facets directed superoposteriorly	Superior facets directed posteriorly	Superior facets directed posteromedially (or medially)	
	Inferior facets directed inferoanteriorly	Inferior facets directed anteriorly	Inferior facets directed anterolaterally (or laterally)	
Movements allowed	Flexion and extension; lateral flexion; rotation; the spine region with the greatest range of movement	Rotation; lateral flexion possible but restricted by ribs; flexion and extension limited	Flexion and extension; some lateral flexion; rotation prevented

**Table 7.3-1 Bones of the Appendicular Skeleton, Part 1: Pectoral Girdle and Upper Limb**

Table 7.3 Bones of the Appendicular Skeleton, Part 1: Pectoral Girdle and Upper Limb					
BODY REGION	BONES*	ILLUSTRATION	LOCATION	MARKINGS	
<b>Pectoral girdle</b> (Figures 7.25, 7.26, 7.27)	<b>Clavicle (2)</b>		Clavicle is in superoanterior thorax; articulates medially with sternum and laterally with scapula	Acromial end; sternal end	
	<b>Scapula (2)</b>		Scapula is in posterior thorax; forms part of the shoulder; articulates with humerus and clavicle	Glenoid cavity; spine; acromion; coracoid process; infraspinous, supraspinous, and subscapular fossae	
<b>Upper limb</b> Arm (Figure 7.28)	<b>Humerus (2)</b>		Humerus is sole bone of arm; between scapula and elbow	Head; greater and lesser tubercles; intertubercular sulcus; radial groove; deltoid tuberosity; trochlea; capitulum; coronoid and olecranon fossae; epicondyles; radial fossa	
	Forearm (Figure 7.29)		<b>Ulna (2)</b>	Ulna is the medial bone of forearm between elbow and wrist; with the humerus (and radius) forms elbow joint	Coronoid process; olecranon; radial notch; trochlear notch; ulnar styloid process; head
			<b>Radius (2)</b>	Radius is the lateral bone of forearm; articulates with carpals to form part of the wrist joint	Head; radial tuberosity; radial styloid process; ulnar notch

*Anterior view of pectoral girdle and upper limb*

\*The number in parentheses ( ) following the bone name denotes the total number of such bones in the body.

Table 7.3	Bones of the Appendicular Skeleton, Part 1: Pectoral Girdle and Upper Limb (continued)			
BODY REGION	BONES*	ILLUSTRATION	LOCATION	MARKINGS
Hand (Figure 7.30)	<p>8 <b>Carpals</b> (16)                      scaphoid                      lunate                      triquetrum                      pisiform                      trapezium                      trapezoid                      capitate                      hamate</p> <p>5 <b>Metacarpals</b> (10)</p> <p>14 <b>Phalanges</b> (28)                      distal                      middle                      proximal</p> <p><i>Anterior view of the hand</i></p>		<p>Carpals form a bony crescent at the wrist; arranged in two rows of four bones each</p> <p>Metacarpals form the palm; one in line with each digit</p> <p>Phalanges form the fingers; three in digits II–V; two in digit I (the thumb)</p>	

\*The number in parentheses ( ) following the bone name denotes the total number of such bones in the body.

Use the following pictures to help you practice finding the terms from the lab term handout on unlabeled images.

- Remember, you won't learn them if you don't take plenty of time to practice!
- Also, be sure to mix up the order once you get comfortable with the unlabeled slides.
- Over the weekend, once you are feeling confident with the pictures here, do the bone model quizzes in PAL (from the Pearson website) to get practice with new pictures that you haven't seen.

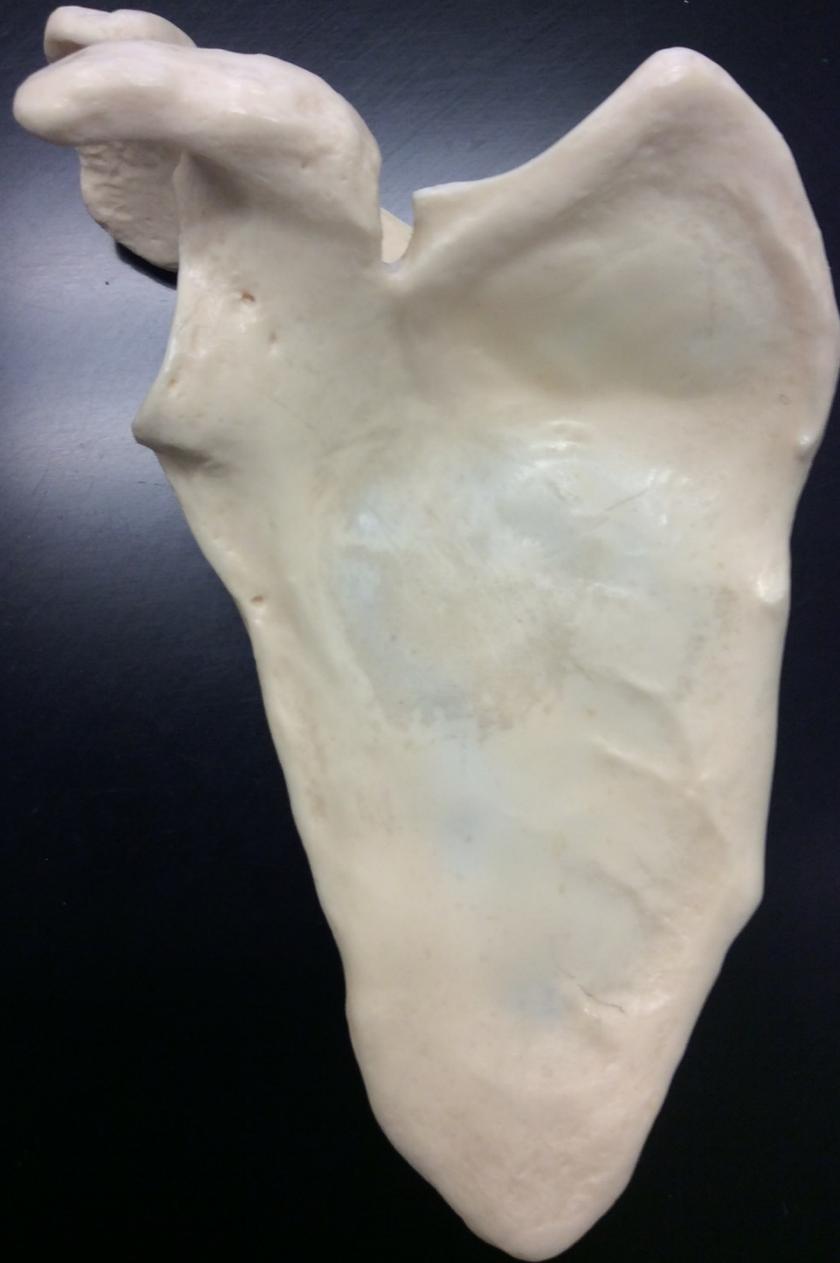

# Pectoral Girdle

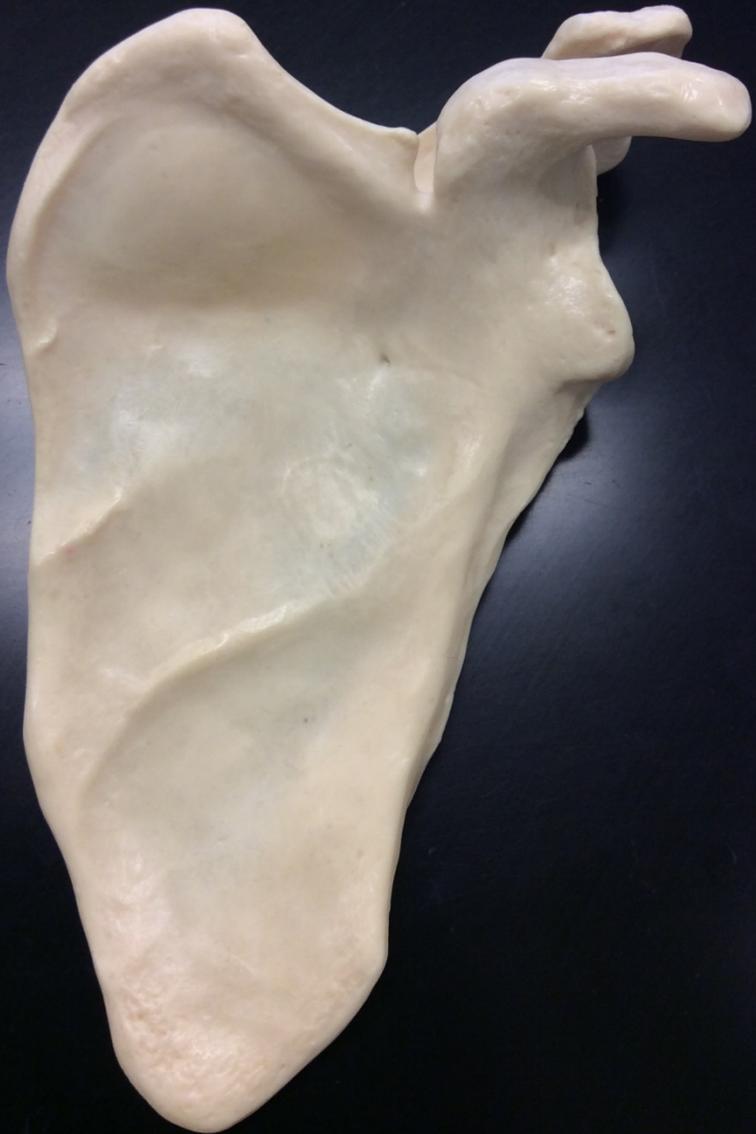

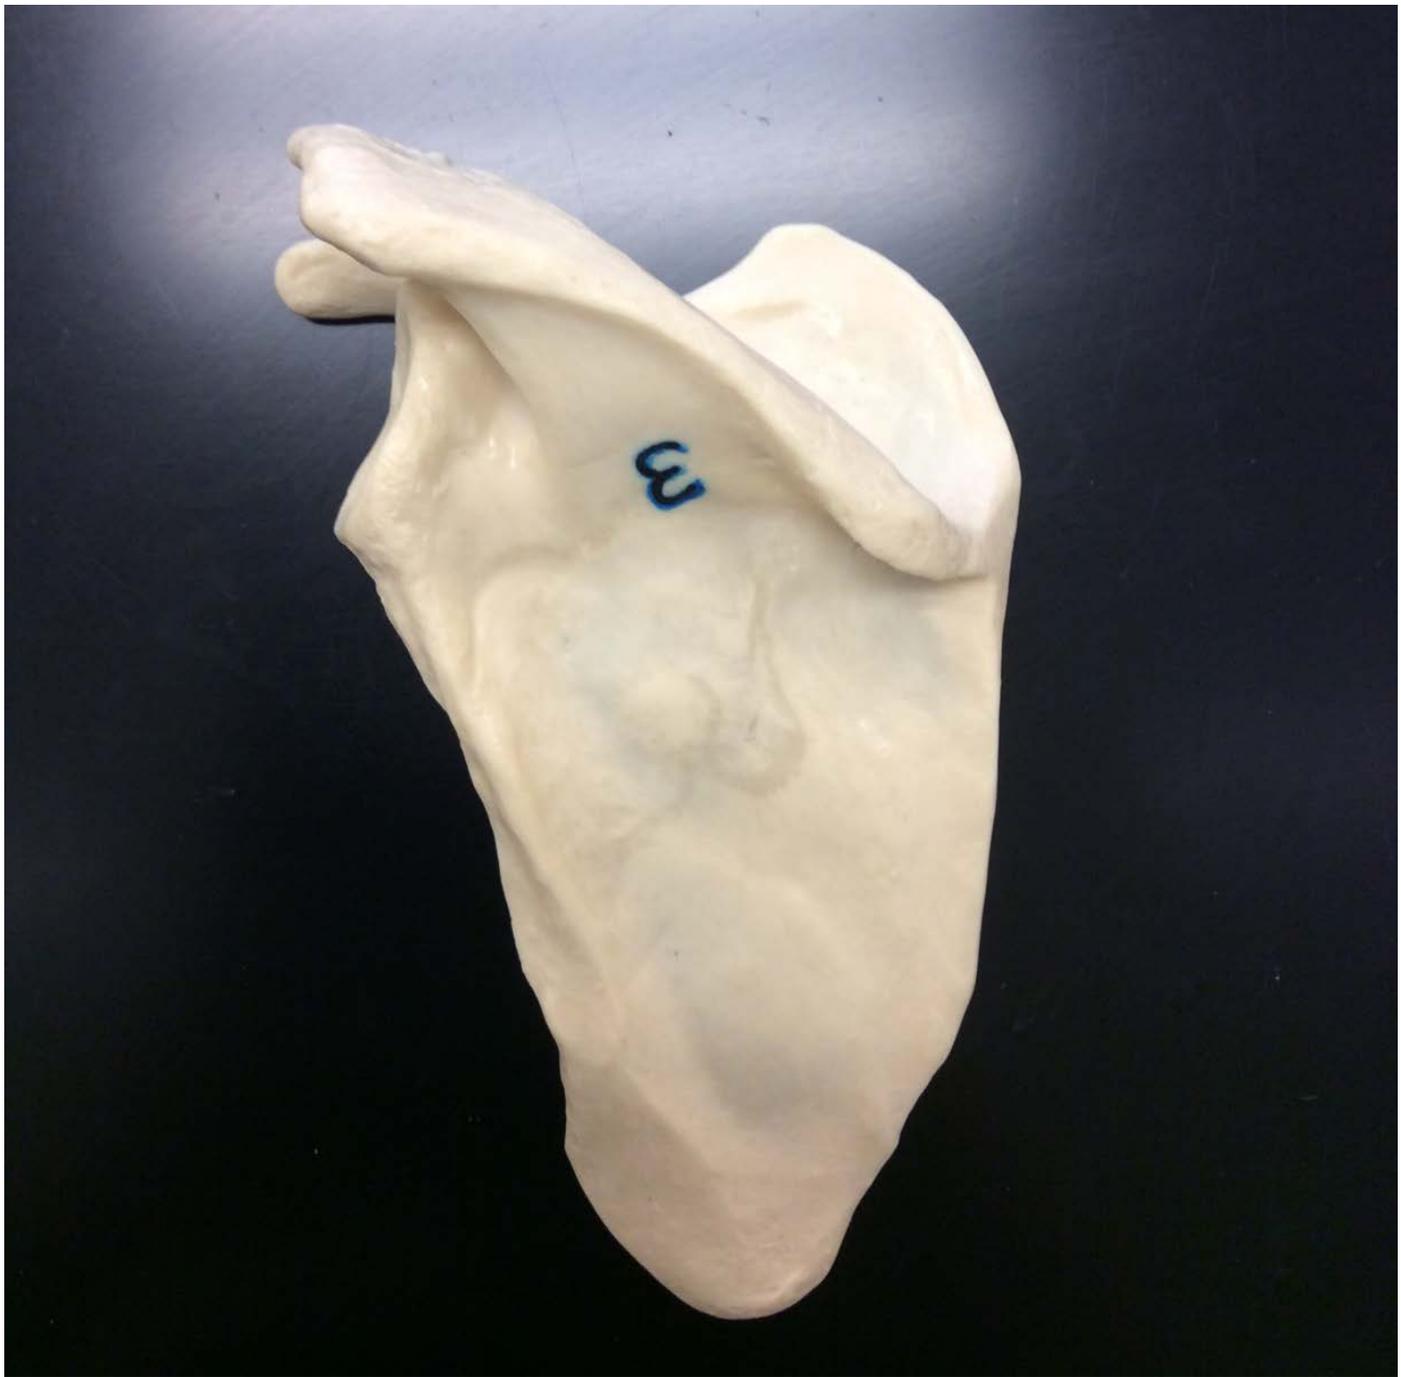

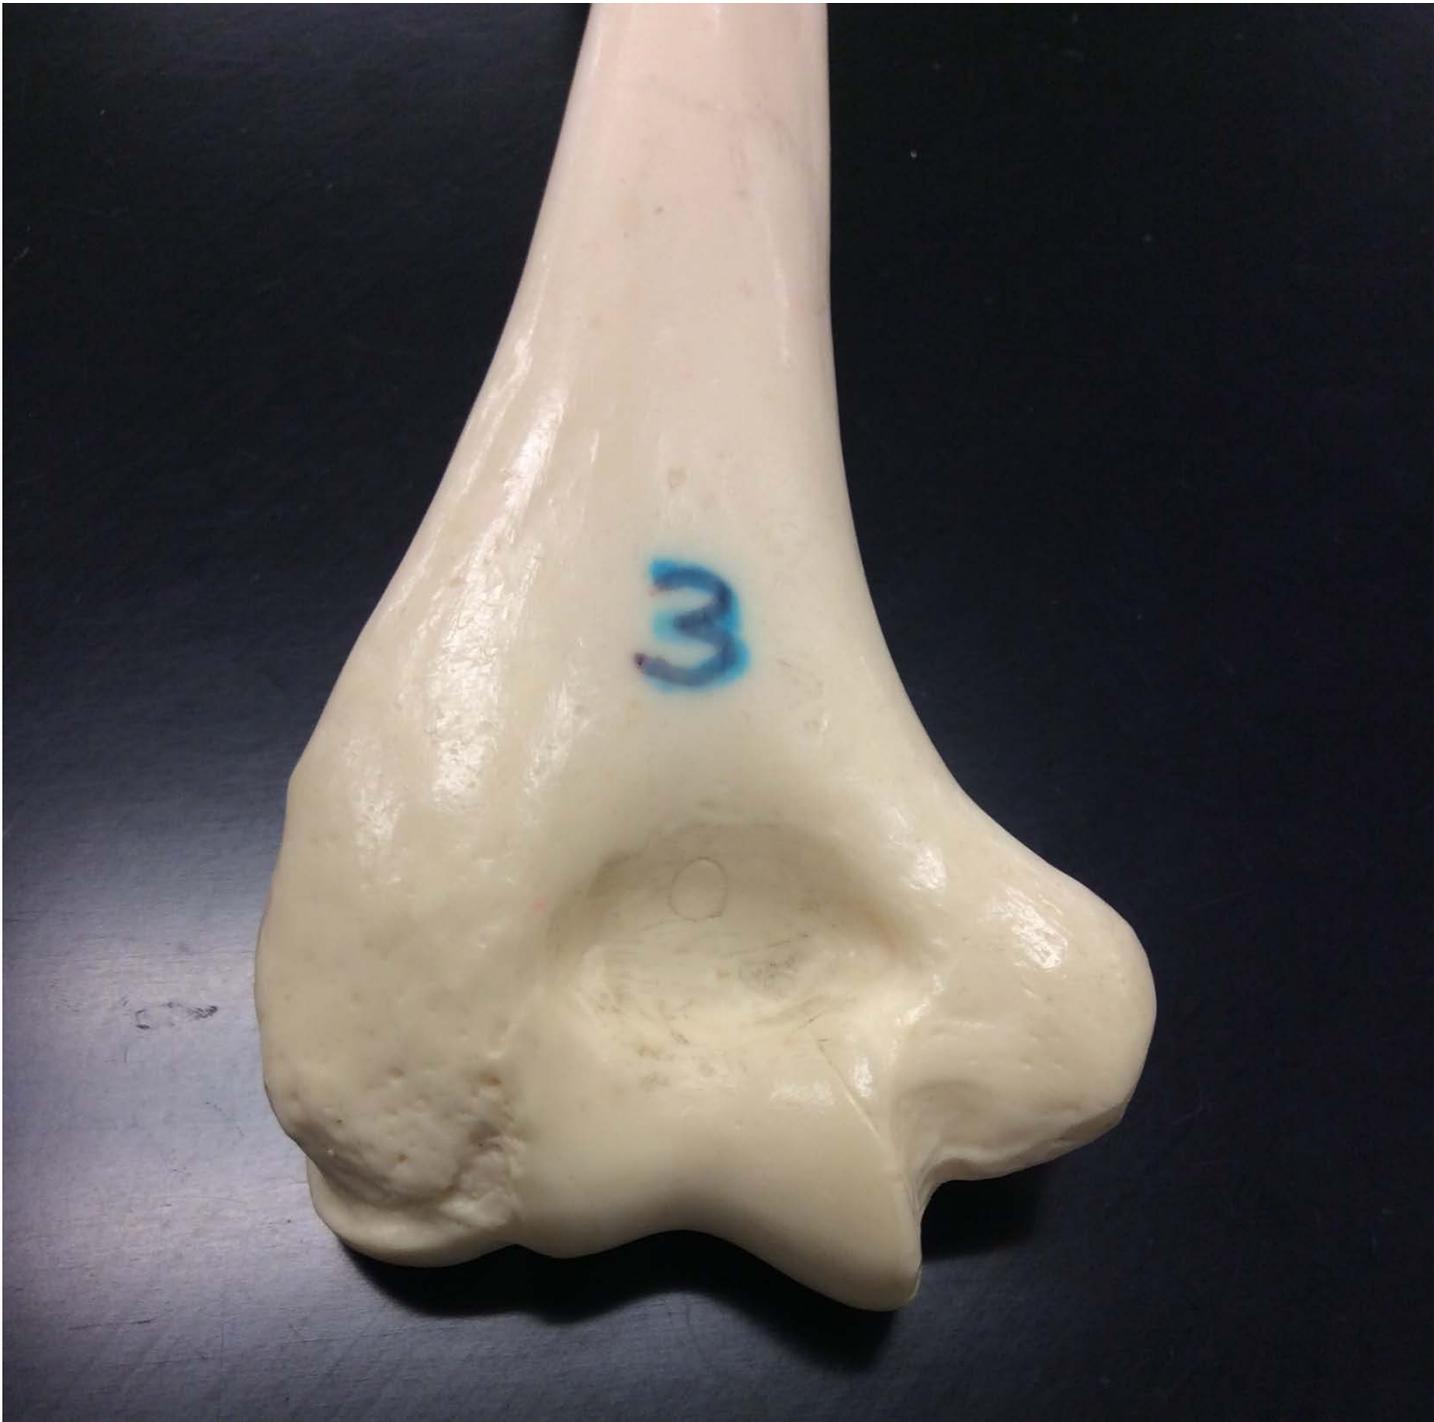

Upper Extremity (Limb)

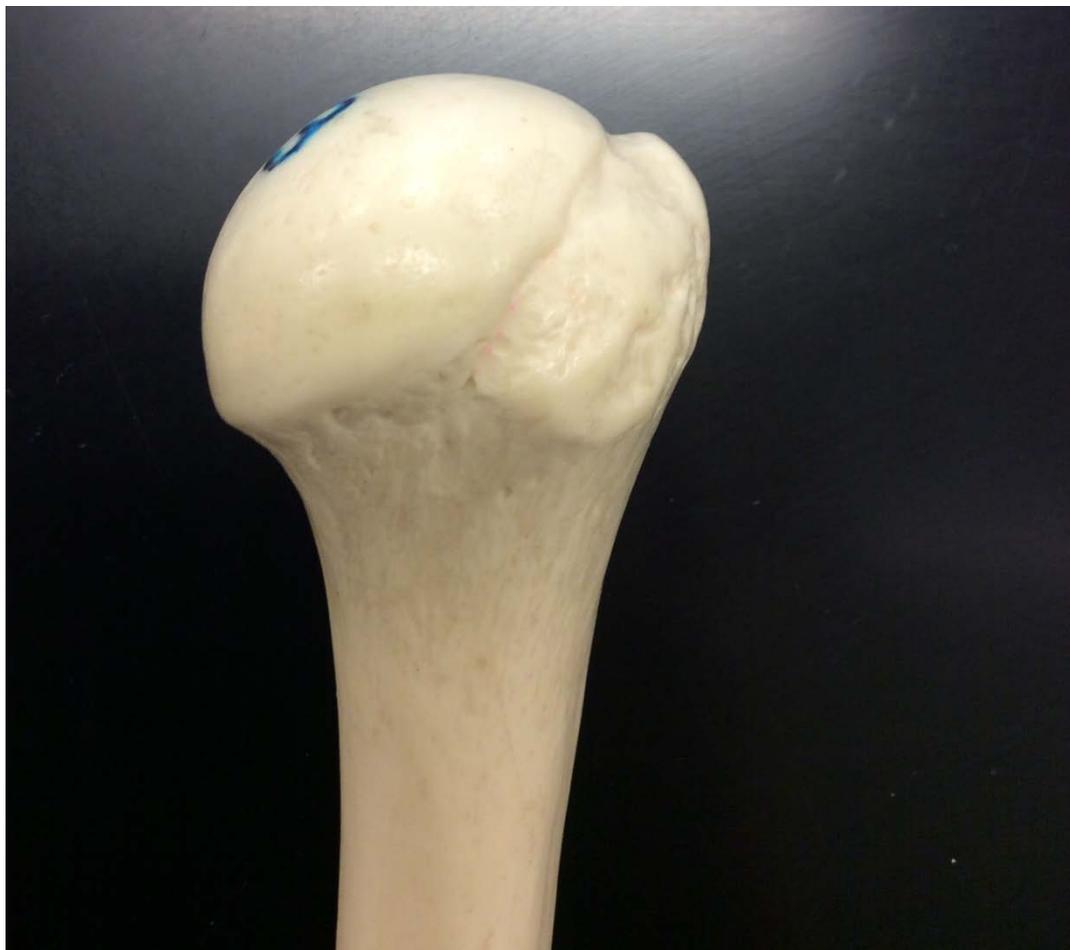

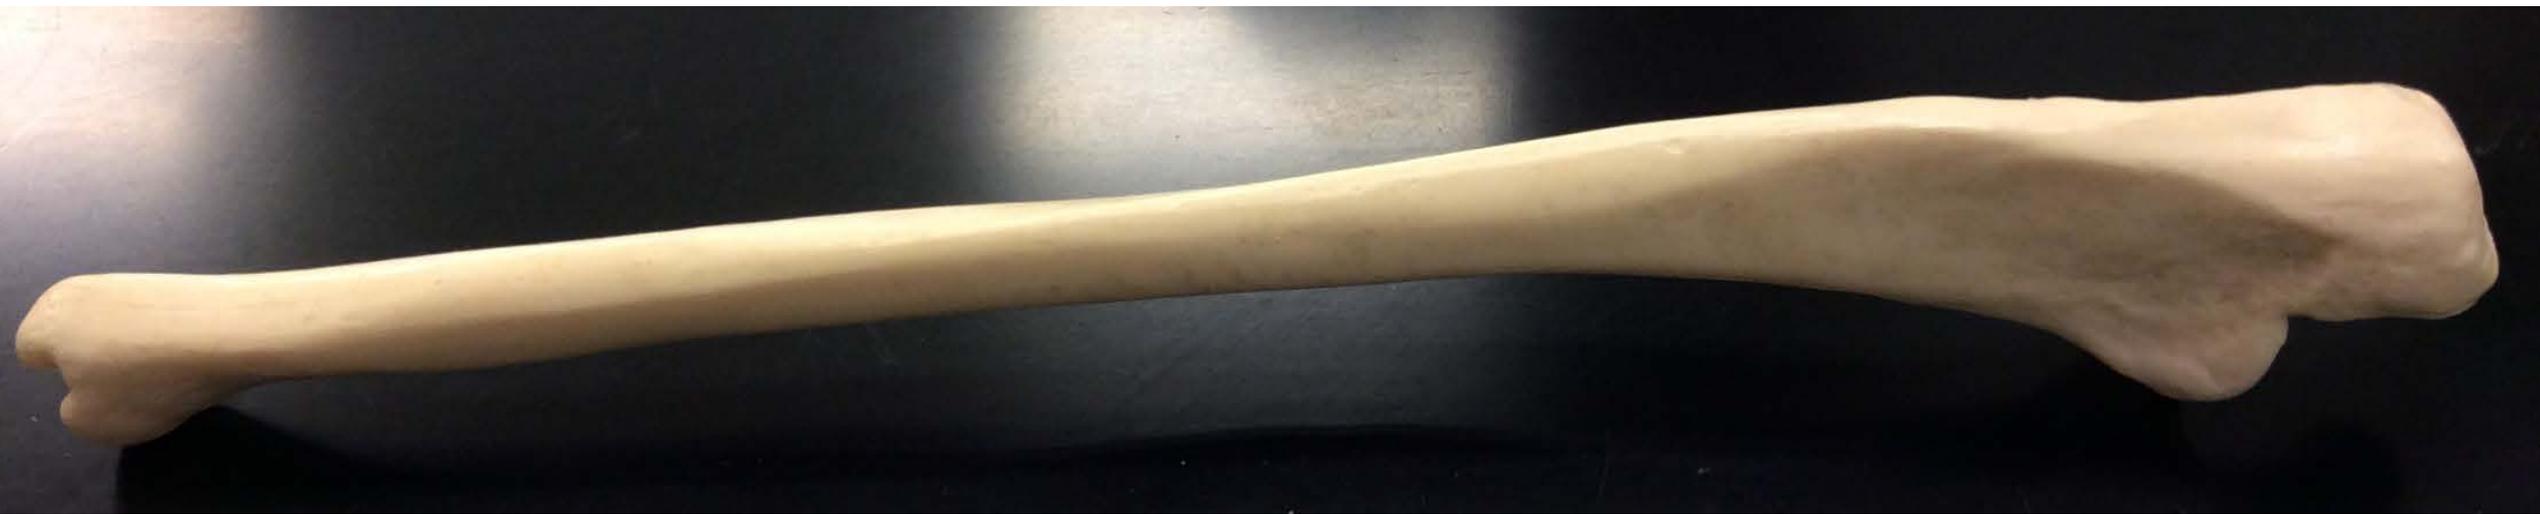

# Use the following pictures to help you identify terms from the lab term handout.

Another good resource is the Visible Body app: <http://skeleton.visiblebody.com>

Don't forget that to use the link to download to a personal device, the device must first be connected to the MCPA Wi-Fi at the Rockville campus.

**(b)** Medial view, right hip bone

Figure 7.32b The hip (coxal) bones.

(b) Medial view, right hip bone

Table 7.4 Comparison of the Male and Female Pelves		
CHARACTERISTIC	FEMALE	MALE
General structure and functional modifications	Tilted forward; adapted for childbearing; true pelvis defines the birth canal; cavity of the true pelvis is broad, shallow, and has a greater capacity	Tilted less far forward; adapted for support of a male's heavier build and stronger muscles; cavity of the true pelvis is narrow and deep
Bone thickness	Less; bones lighter, thinner, and smoother	Greater; bones heavier and thicker, and markings are more prominent
Acetabula	Smaller; farther apart	Larger; closer
Pubic arch/subpubic angle	Broader (80° to 90°); more rounded	Angle is more acute (50° to 60°)
Anterior view		

**Table 7.4** Comparison of the Male and Female Pelves (*continued*)

CHARACTERISTIC	FEMALE	MALE
Sacrum	Wider; shorter; sacral curvature is accentuated	Narrow; longer; sacral promontory more ventral
Coccyx	More movable; projects inferiorly	Less movable; projects anteriorly
Greater sciatic notch	Wide and shallow	Narrow and deep

Left lateral view

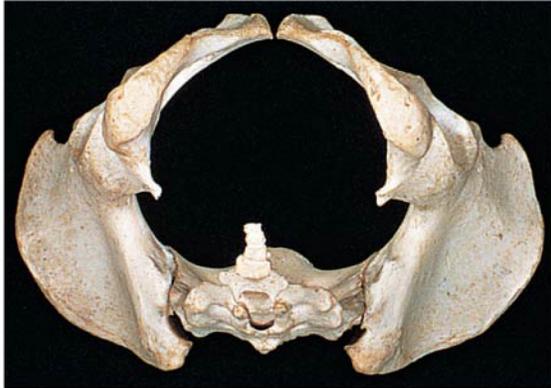

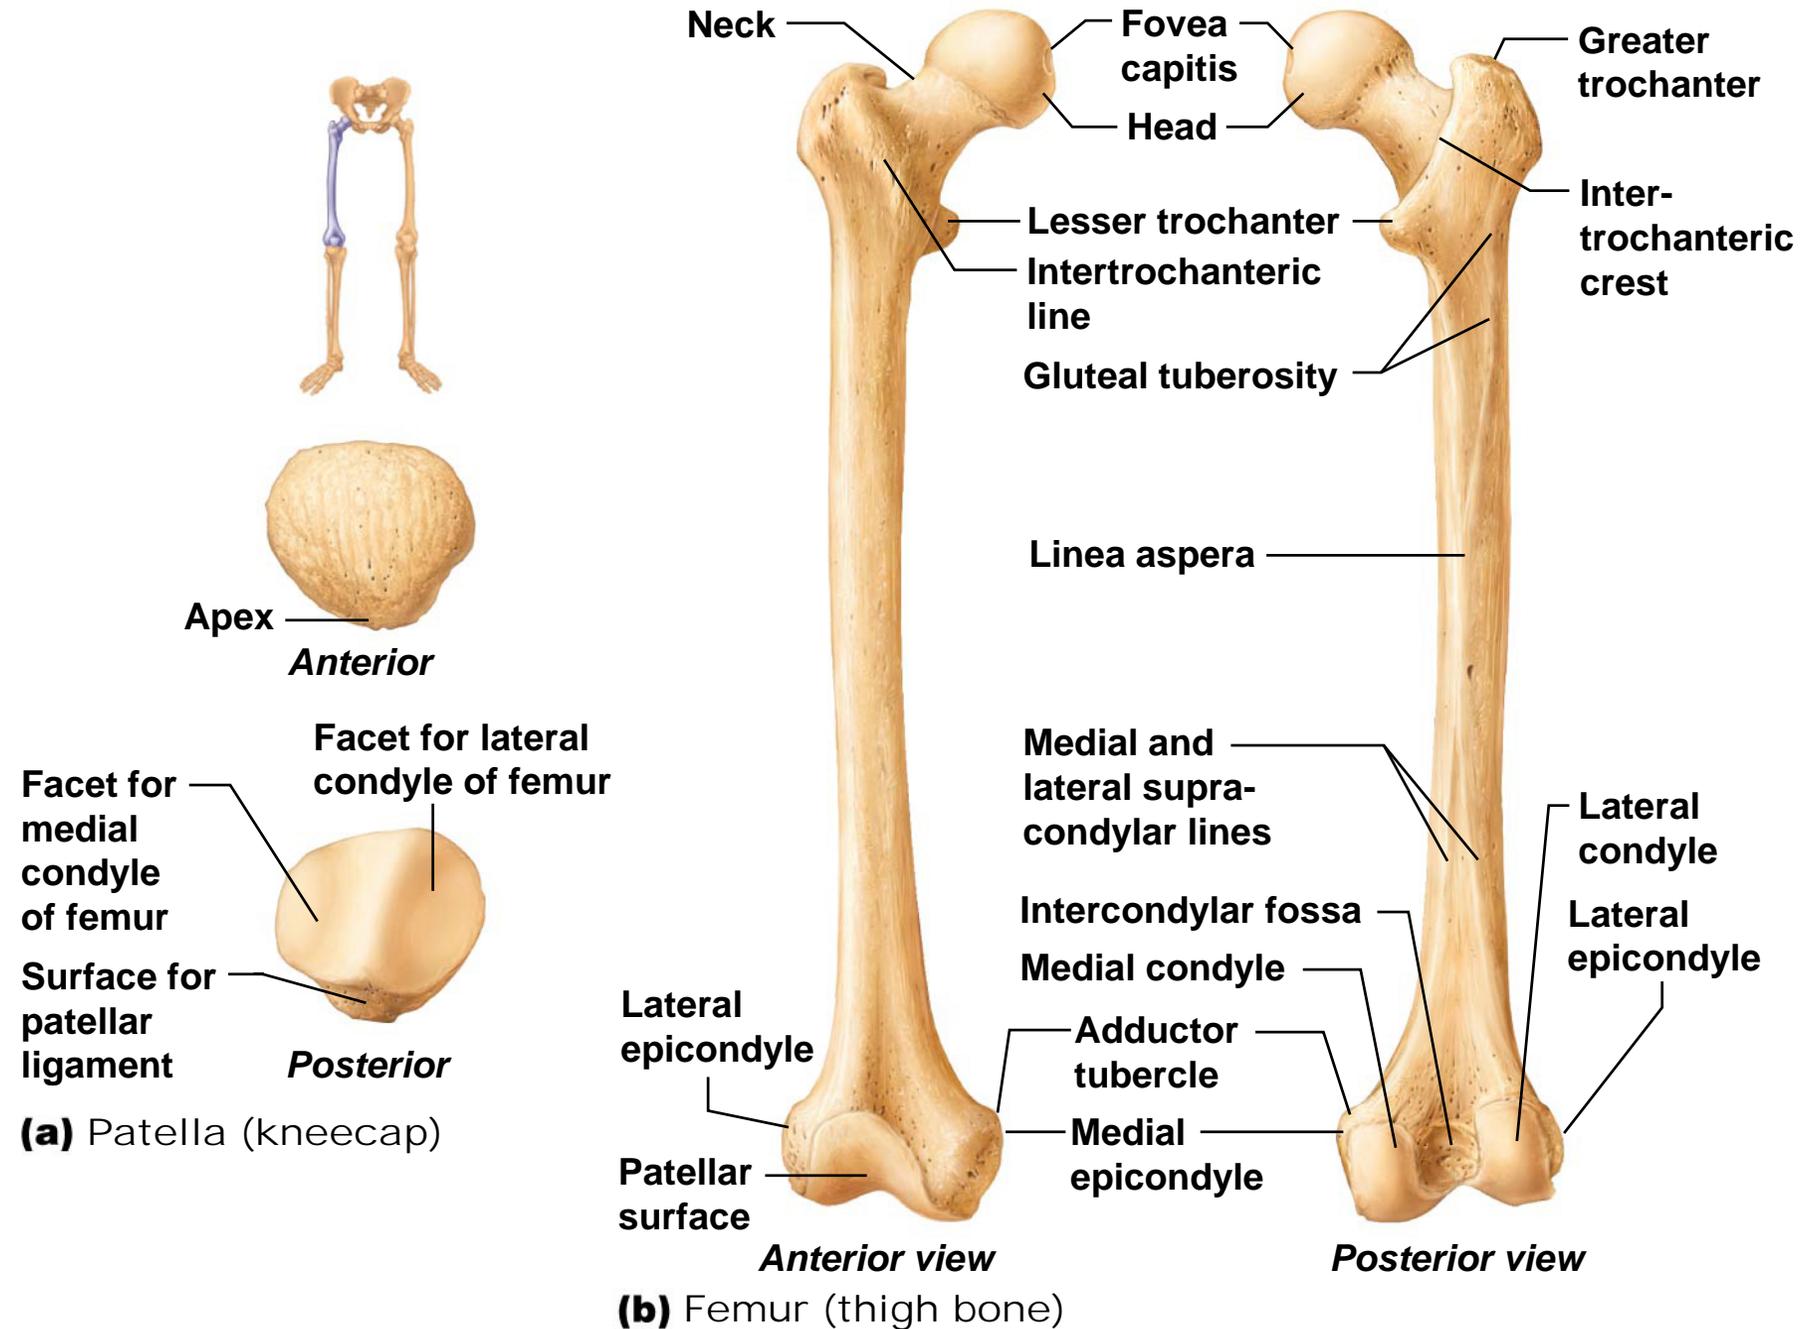

Table 7.4 Comparison of the Male and Female Pelves ( <i>continued</i> )		
CHARACTERISTIC	FEMALE	MALE
Pelvic inlet (brim)	Wider; oval from side to side	Narrow; basically heart shaped
Pelvic outlet	Wider; ischial tuberosities shorter, farther apart and everted	Narrower; ischial tuberosities longer, sharper, and point more medially
Posteroinferior view

Table 7.5		Bones of the Appendicular Skeleton, Part 2: Pelvic Girdle and Lower Limb		
BODY REGION	BONES*	ILLUSTRATION	LOCATION	MARKINGS
<p><b>Pelvic girdle</b> (Figures 7.31, 7.32)</p>	<p><b>Coxal (2)</b> (hip)</p>		<p>Each hip (coxal) bone is formed by the fusion of an ilium, ischium, and pubis; the hip bones articulate anteriorly at the pubic symphysis and form sacroiliac joints with the sacrum posteriorly; girdle consisting of both hip bones and the sacrum is basinlike</p>	<p>Iliac crest; anterior and posterior iliac spines; auricular surface; greater and lesser sciatic notches; obturator foramen; ischial tuberosity and spine; acetabulum; pubic arch; pubic crest; pubic tubercle</p>
<p><b>Lower limb</b> Thigh (Figure 7.33)</p>	<p><b>Femur (2)</b></p>		<p>Femur is the sole bone of thigh; between hip joint and knee; largest bone of the body</p>	<p>Head; greater and lesser trochanters; neck; lateral and medial condyles and epicondyles; gluteal tuberosity; linea aspera</p>
<p>Kneecap (Figure 7.33)</p>	<p><b>Patella (2)</b></p>		<p>Patella is a sesamoid bone formed within the tendon of the quadriceps (anterior thigh) muscles</p>	

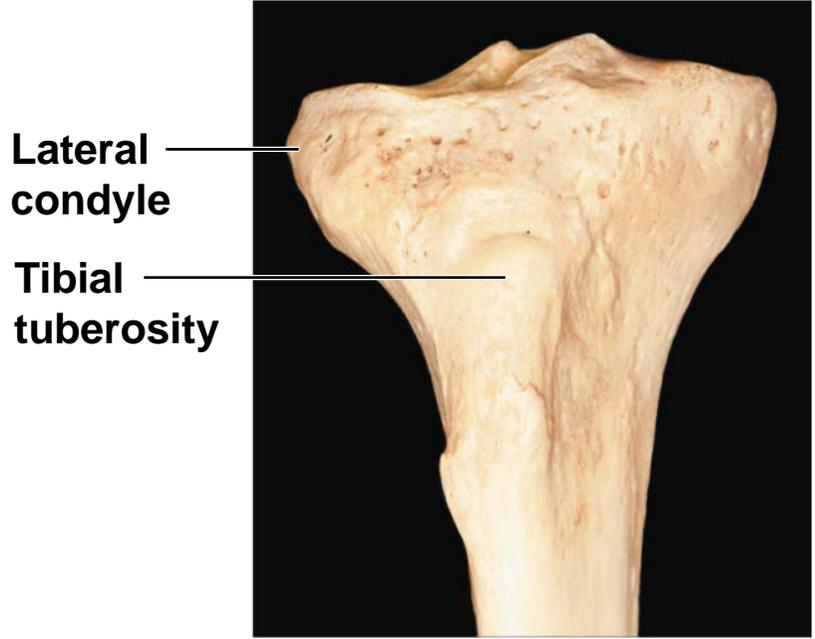

\* The number in parentheses ( ) following the bone name denotes the total number of such bones in the body.

Table 7.5 Bones of the Appendicular Skeleton, Part 2: Pelvic Girdle and Lower Limb (continued)					
BODY REGION	BONES*	ILLUSTRATION	LOCATION	MARKINGS	
Leg (Figure 7.34)	<b>Tibia</b> (2)		Tibia is the larger and more medial bone of leg; between knee and foot	Medial and lateral condyles; tibial tuberosity; anterior border; medial malleolus	
	<b>Fibula</b> (2)		Fibula is the lateral bone of leg; sticklike	Head; lateral malleolus	
Foot (Figure 7.35)	<b>7 Tarsals</b> (14) talus calcaneus navicular cuboid lateral cuneiform intermediate cuneiform medial cuneiform		Tarsals are seven bones forming the proximal part of the foot; the talus articulates with the leg bones at the ankle joint; the calcaneus, the largest tarsal, forms the heel		
	<b>5 Metatarsals</b> (10)		Metatarsals are five bones numbered I–V		
	<b>14 Phalanges</b> (28) distal middle proximal	Phalanges form the toes; three in digits II–V, two in digit I (the great toe)			

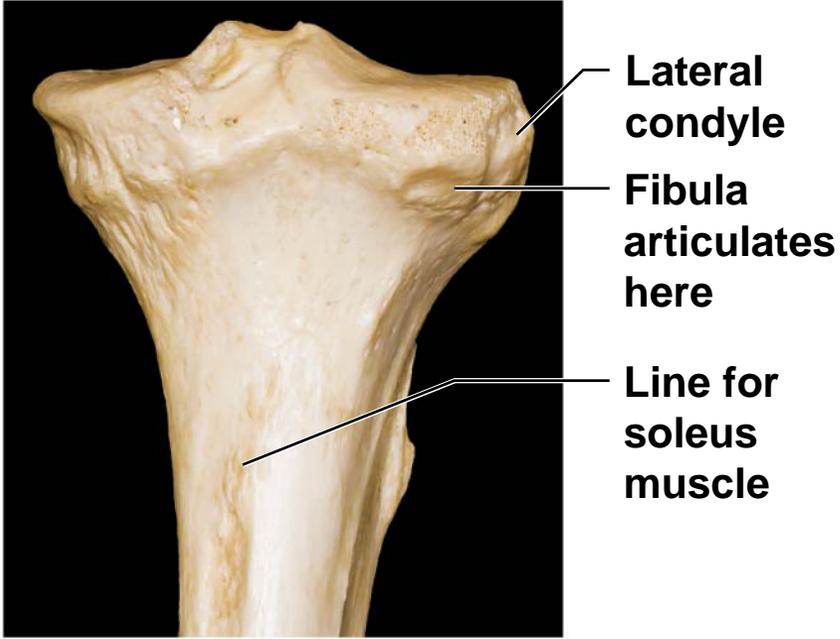

\* The number in parentheses ( ) following the bone name denotes the total number of such bones in the body.
