

# Active and Collaborative Learning Techniques

**SUMMER 2018**

**SESSION I**

**CAROLIEN ANNINK**

# PARTICIPANT LEARNING OUTCOMES

By the end of this three-workshop series participants will be able to:

- Describe the importance of collaborative and active classroom activities for successful student learning
- Name 8-10 techniques that support collaborative and active learning (CoAlts)
- Design 3 lesson plans incorporating 3-5 CoAlt classroom activities
- Present an action-research project plan, on teaching with CoAlts

# ACTIVE LEARNING VS TRADITIONAL LECTURES

- New York Times article (Sep 2015): Are College-lectures Unfair?
  1. Students over all **perform better** in active-learning courses than in traditional lecture courses.
  2. Women, minorities, and low-income and first-generation students **benefit more**, on average, than white males from more affluent, educated families.

*“Given that active-learning approaches benefit all students, but especially those who are female, minority, low-income and first-generation, shouldn’t all universities be teaching this way?”*

[http://www.nytimes.com/2015/09/13/opinion/sunday/are-college-lectures-unfair.html?smid=fb-share&\\_r=0](http://www.nytimes.com/2015/09/13/opinion/sunday/are-college-lectures-unfair.html?smid=fb-share&_r=0)

# ACTIVE LEARNING VS TRADITIONAL LECTURES

Nature, July 2015

## Why we are teaching science wrong, and how to make it right

- *In the United States, which keeps the most detailed statistics on this phenomenon, about 60% of students who enrol in a STEM field switch to a non-STEM field or drop out<sup>2</sup> (see '[A persistence problem](#)'). That figure is roughly 80% for those from minority groups and for women.*
- *Students gain a much deeper understanding of science when they actively grapple with questions than when they passively listen to answers.*
- <http://www.nature.com/news/why-we-are-teaching-science-wrong-and-how-to-make-it-right-1.17963>

“At this point it is unethical to teach any other way.”

# CLIP U. OF VERMONT MEDICAL SCHOOL

## Vermont Medical School Says Goodbye To Lectures NPR – August 3, 2017

Something needs to be done. What can you do? At the classroom level?

# STUDIES SHOW

- Cognitive gain – improving reaching SLOs & higher-order thinking
- Student engagement, attitudes, persistence, personal development
- Good educational practice: 7 principles of good HE
- Beneficial for a wide range of students
- Valued by students and teachers

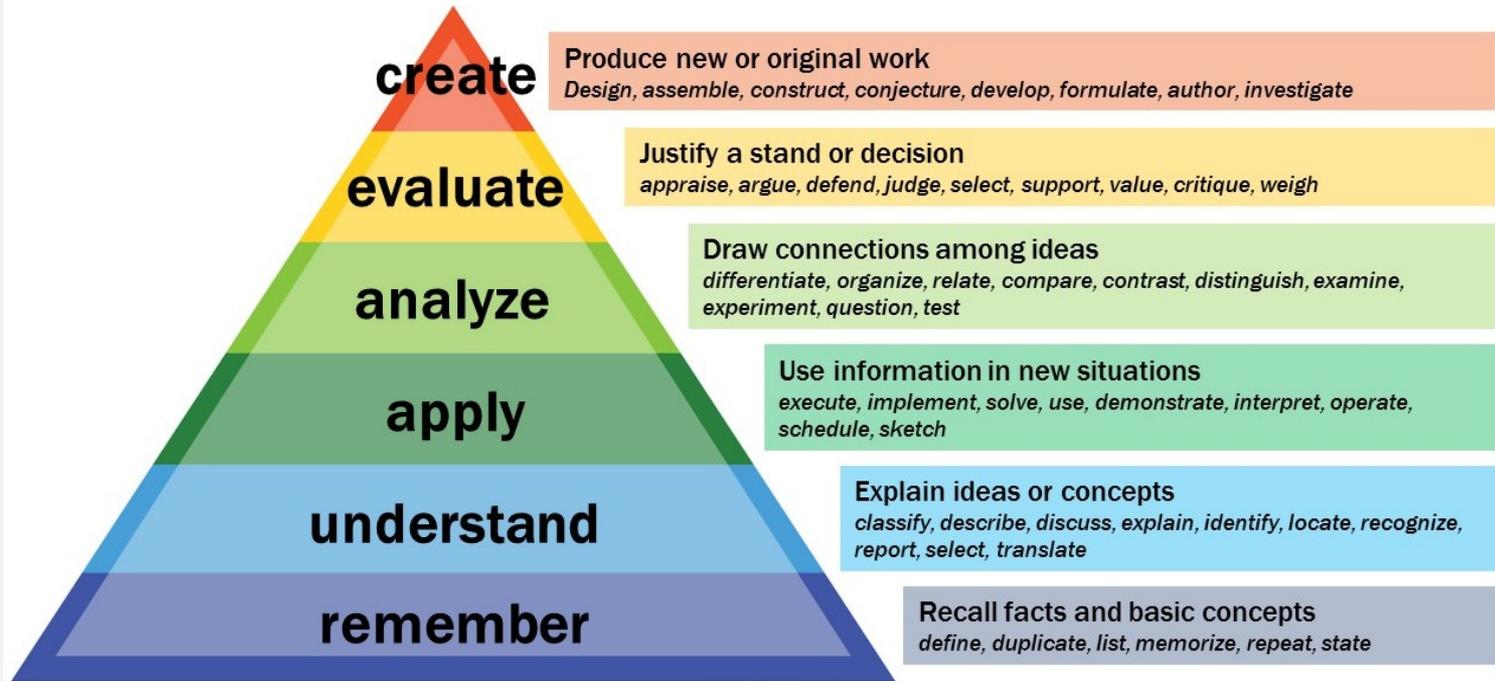

# AND...

Major conclusions of **modern cognitive learning theory**:

- Students must be actively engaged in building their own minds.
- Achievement, motivation, satisfaction
- Positive interdependence and individual accountability

# LEARNING OUTCOMES

## Bloom's Taxonomy

Where do we want our students to be on the pyramid?  
College expectation- Higher level thinking

# MC ELITE SUMMER 2018 COLLABORATIVE AND ACTIVE LEARNING CATEGORIES

Overview groups of techniques we will discuss:

- ❖ **Discussion** Techniques
- ❖ Techniques for **Reciprocal Teaching**
- ❖ **Problem Solving** Techniques
- ❖ Techniques using **Graphic Information Organizers**

# SESSION 1: DISCUSSION TECHNIQUES

## Learning activities

to practice critical thinking  
& higher level thinking skills

- Round Robin
- Think-Pair-Share
- Buzz Groups
- Talking Chips
- Three-step Interview

# TECHNIQUE 1: ROUND ROBIN

Procedure:

Pose prompt: “When I hear... it makes me think of....(one word!)”

- Explain brainstorm, taking turns, stating one word, no discussion
- Write on board or ask for volunteer scribe
- Each student takes a turn and answers aloud
- Moving from student to student
- Finish with going over list, point out the knowledge already in the classroom

# TECHNIQUE 2: THINK-PAIR-SHARE

Procedure:

- Pose question to class
- Give students few minutes to think and prepare response
- Ask student to pair with neighbor
- Students exchange their responses

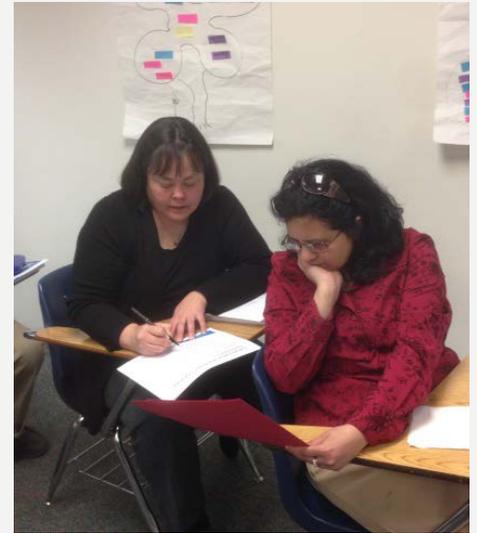

---

Excellent way to have students actively think about e.g. a lecture, the reading, a video, etc.

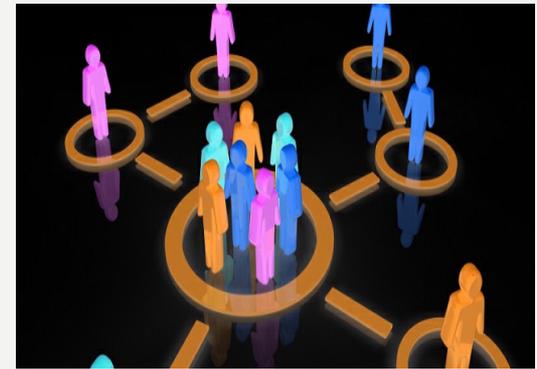

*Instructor formulates the question.*

*Don't go over 5 minutes. Move on or have a quick "what did you say"?*

*Question could be at different Bloom levels: recall info from lecture, compare info, analyze etc.*

# TECHNIQUE 3: BUZZ GROUPS

## Procedure:

- Form groups
- Announce discussion prompt
- Announce (and enforce) time limit
- Guide exchange of ideas
- Check on staying on task
- Gather in whole group for further discussion

*Moving from pairs to small groups – teaching students to get comfortable speaking up.  
Formulation of the prompt is very important = instructor’s job. Time is important! Not too long.*

# BUZZ GROUPS

# TECHNIQUE 4: TALKING CHIPS

## Procedure:

- Form groups - oversee donation of chips
- Give each student 3-5 chips
- Instruct students: Pay (put in circle) 1 chip for each contribution to discussion
- Inform students, Discuss using all chips, no more, no less.

Faculty practices discussing using this technique by short video:

<https://www.youtube.com/watch?v=qjGir7y7hmc>

- *What is Dr. Flores' main assertion? Believe in the generational jump, through education.*
- *How does she proceed supporting this main claim?*
- *What factors does she assert are play a role for the gap*
- *Better targeted interventions due to more DATA*

# TECHNIQUE 5: THREE-STEP INTERVIEW

## Procedure:

- Fours, same size, As, Bs, Cs, Ds
- Step 1: Pair up ABs and CDs
- Interview each other, using questions instructor provides, taking notes, switch roles half way
- Step 2: regroup in 4s: A, B, C, D
- Step 3: All students summarize/present their partner's response to the ABCD group

*Questions could be about lecture, read chapter, post-test, personal experiences, etc.*

# HOMework

## Learning opportunity in between sessions:

Use the worksheet to document.

- Select one of the discussion techniques, design a lesson incorporating it, and (if you are teaching) try it out in class.
- Use the worksheet to document your experiences OR fill out the worksheet using speculations about plusses and deltas while implementing
- Be prepared to present your work at next session

# ACTION-RESEARCH WORKSHEET

## Planning sheet – Implementation of Technique(s) for Student Success

Choose one **course** you teach this semester (& which section if you have more than 1, in which you want to experiment using this CoAlt:

At which **chapter or topic** will you use the technique?

Will you compare this experience with a **control group**, either last semester's cohort, or this semester and other section?

What is your **prediction** and how will you **measure the effect** of implementing your one technique?

e.g. more enthusiasm/motivation; more participation; higher quiz/test outcomes; better written work

**Journal** – Note your observations implementing the technique and your experiences during implementation. What were your outcomes and how did you measure them? What or how would you adapt the technique for the future?
