

# Youth Day at Montgomery College

## October 8, 2022

### Germantown Campus

#### Powering Up Career in Biotechnology

***Do you know that vaccine(s), which start the body's immune response against diseases, is a biotechnology product?***

On Youth Day at Montgomery College at Biotechnology on October 8, 2022, youth will learn and participate in activities involved in vaccine production. They will learn about biotechnology, techniques/work practices used in the biotechnology lab to work safely, and get an introduction to laboratory skills for producing a vaccine. The activities at youth day will encourage and pique the interest of the new generation in a biotech career. Montgomery College's Early College Program provides a faster roadmap to a biotechnology career while saving on college tuition. Parents and youth will be provided access to faculty and staff for discussion. ***Three prizes will be given to youth demonstrating good performance at the end of the year.***
